

Integral Laser Sighting System

M-B Companies is pleased to introduce a new standard in optical sighting for pavement marking. HoloVision™ is a state-of-the-art holographic sighting system, based on the “Heads Up Display” technology commonly associated with fighter aircraft. This quality, low cost unit allows for in-cab mounting which eliminates the “wash-out” commonly experienced in bright conditions with other optical sights.

ADVANTAGES OF HOLOVISION™

- Eliminates the need for external sighting devices such as front-mounted mechanical guides.
- Can be attached anywhere in driver’s cab allowing for a single-operator alignment and operation.
- Holographic image is not projected on to roadway but rather confined to the HoloVision™ sight. Wash-out typically experienced when using optical sights in high sunlight conditions is eliminated.
- Twenty different brightness settings are available to adjust the sight display to any ambient lighting conditions.
- Holographic image technology allows for operator movement without losing sight point-of-reference.
- The HoloVision™ sight is packaged in a waterproof, fog proof, shock resistant housing.
- Available power configurations include a 12-volt (lighter adapter) and self-contained battery designs.
- Protective case for storing the HoloVision™ sight and mount is included.
- Break-through technology at a low price.
