The operator’s manual is a technical service guide and must always accompany the machine.

Manual 971-175B
May 2009
SAFETY

Take note! This safety alert symbol found throughout this manual is used to call your attention to instructions involving your personal safety and the safety of others. Failure to follow these instructions can result in injury or death.

This symbol means:
ATTENTION!
BECOME ALERT!
YOUR SAFETY IS INVOLVED!

Signal Words

Note the use of the signal words DANGER, WARNING and CAUTION with the safety messages. The appropriate signal words for each have been selected using the following guidelines:

⚠️ DANGER: Indicates an imminently hazardous situation that, if not avoided, will result in death or serious injury.

⚠️ WARNING: Indicates a potentially hazardous situation that, if not avoided, could result in death or serious injury, and includes hazards that are exposed when guards are removed. It may also be used to alert against unsafe practices.

⚠️ CAUTION: Indicates a potentially hazardous situation that, if not avoided, may result in minor or moderate injury.

8 - WARRANTY 45
1 - GENERAL INFORMATION

Thank you and congratulations for having chosen our implement. Your new three point gang grooming mower is a technologically advanced machine constructed of high quality, sturdy components that will fulfill your working expectations. Read this manual carefully. It will instruct you on how to operate and service your mower safely and correctly. Failure to do so could result in personal injury and/or in equipment damage.

1.01 - General

⚠️ CAUTION: Unless otherwise specified, all hardware is metric. Use only metric tools on metric hardware. Other tools that do not fit properly can slip and cause injury.

⚠️ CAUTION: Right hand and left hand sides of the implement are determined by facing in the direction the implement will travel when going forward (see fig. 2).

1.02 - Model and Serial Number ID

Attached to the frame is an ID plate showing the model and the serial number. Record your implement model and serial number in the space provided below. Your dealer needs this information to give you prompt, efficient service when you order parts.

Carefully read the Warranty section\(^1\), detailing coverage and limitations of this warranty. Warranty is provided for customers who operate and maintain their equipment as described in this manual. Warranty registration is accomplished by the dealer by

\(^1\) See Chapter 8 - Warranty.
completing and forwarding the Warranty Registration form to the Company, along with a copy of the dealer’s invoice. It is in your best interest to insure that this has been done.

Warranty does not cover the following:
1. Cleaning, transporting, mailing and service call charges.
2. Normal wear items such as belts, blades, bearings, drivelines, shear pins, slip clutches, hydraulic hoses and seals, tires, etc.
3. Depreciation or damage caused by normal wear, accidents, improper maintenance, improper protection or improper use.
4. The use of non-original spare parts and accessories.

Your Authorized Company Dealer has genuine parts in stock. Only these approved replacement parts should be used.

This limited warranty covers defective material and workmanship. The cost of normal maintenance or repairs for accidents or improper use and related labor will be borne by the owner.

Fig. 2 - Front and rear mounted Ez-Flex.
2 - SAFETY PRECAUTIONS

Safety is the primary concern in the design and manufacture of our products. Unfortunately our efforts to provide safe equipment can be wiped out by a single careless act of an operator.

In addition to the design and configuration of equipment, hazard control and accident prevention are dependent upon the awareness, concern, prudence and proper training of personnel involved in the operation, transport, maintenance and storage of equipment. It is the operator's responsibility to read and understand all safety and operating instructions in the manual and to follow these.

Allow only properly trained personnel to operate the mower. Working with unfamiliar equipment can lead to careless injuries. Read this manual, and the manual for your tractor, before assembly or operation, to acquaint yourself with the machines. It is the mower owner's responsibility, if this machine is used by any person other than yourself, is loaned or rented, to make certain that the operator, prior to operating, reads and understands the operator's manuals and is instructed in safe and proper use.

2.01 - Preparation

⚠️

1. Before operating equipment read and understand the operator's manual and the safety signs (see fig. 3).
2. Thoroughly inspect the implement before initial operation to assure that all packaging materials, i.e., wires, bands, and tape have been removed.
3. Personal protection equipment including hard hat, safety glasses, safety shoes, and gloves are recommended during assembly, installation, operation, adjustment, maintaining and/or repairing the implement.
4. Operate the mower only with a tractor equipped with an approved Roll-Over-Protective-System (ROPS). Always wear your seat belt. Serious injury or even death could result from falling off the tractor.
5. Clear area to be cut of stones, branches or other debris that might be thrown, causing injury or damage.
6. Operate only in daylight or good artificial light.
7. Ensure mower is properly mounted, adjusted and in good operating condition.
8. Ensure that all safety shielding and safety signs are properly installed and in good condition.
2.02 - Starting and Stopping

1. Be sure that no one is near the machine prior to engaging or while the machine is working.
2. Be sure the tractor is in “Neutral” before starting engine.
3. Mower operating power is supplied from tractor PTO. Refer to your tractor manual for PTO engagement and disengagement instructions. Always operate PTO at 540 rpm. Know how to stop the tractor and mower quickly in case of an emergency.
4. When engaging PTO, the engine rpm should always be low. Once engaged and ready to start cutting, raise PTO speed to 540 rpm and maintain throughout cutting operation.
5. Check the tractor master shield over the PTO stub shaft. Make sure it is in good condition and fastened securely to the tractor. Purchase a new shield if old shield is damaged or missing.
6. After striking an obstacle, disengage the PTO, shut the tractor down and thoroughly inspect for damage before restarting.
7. Never engage the PTO until the mower is in the down position and resting on the ground. Never raise the mower until all blades have come to a complete stop.
8. To park the vehicle safely, stop vehicle on a level surface (not on a slope), disengage PTO, engage the parking brake, stop the engine, remove the key, and wait for engine and all moving parts to stop before leaving the operator’s seat.
9. Stay clear of rotating drivelines. Entanglement in rotating driveline can cause serious injury or death. Wear close fitting clothing. Stop the engine and be sure PTO driveline is stopped before getting near it.

2.03 - Messages and Signs

1. Read and adhere to all safety and operating decals on this machine (see fig. 3).
2. Before dismounting tractor: allow moving parts to stop, stop engine, set brake and remove the key of unattended equipment.
3. Keep away from rotating blades and driveline.
4. Keep guards and shields in place and in good condition.
5. Do not mow with bystanders in area.
6. Allow no riders on tractor or mower.
7. Allow moving parts to stop before repair.
8. Securely support mower before working underneath.
9. Lock up raised wings before transport (see fig. 11).

Additional warning and operating decals are available at no extra charge. Please specify model and serial number when ordering.
Fig. 3 - Safety decals, main frame; replace immediately if damaged.

**WARNING**
- High-pressure hydraulic oil leaks can penetrate skin resulting in serious injury, permanent damage, or death.
- Always handle equipment with care and consideration.
- Wear protective clothing, including gloves and goggles.
- Keep area clear of debris and obstacles.
- Do not operate equipment near water or open flames.
- Keep children and unattended persons away.
- Do not operate equipment under the influence of drugs or alcohol.

**CAUTION**
- To avoid serious injury:
  - Read instruction manual before operating equipment. Follow all safety precautions and use instructions.
  - Always wear appropriate safety gear, including hard hat, safety glasses, and hearing protection.
  - Do not operate equipment in crowded areas.
  - Do not operate equipment while fatigued or under the influence of drugs or alcohol.
  - Keep children and unattended persons away.

**WARNING**
- Crushed equipment can drop and crush.
- Always move equipment while it is clear of obstacles.
- Always secure equipment with safety chains when moving.
- Always follow instructions when lifting and lowering equipment.
- Always ensure that all safety chains are engaged before operating equipment.

- Failure to follow these instructions can result in serious injury or death.

**Red reflective decal**
- Attach reflective decals to equipment for increased visibility.
- Check decals regularly and replace if damaged.
- Always use decals that are visible in all conditions.

[Diagram showing safety decals on the left and right sides of the equipment]
- Red reflective decal
- Left side
- Right side

**Crushing and Pinching Hazards**
- Be extremely careful when operating equipment near objects, people, or animals.
- Always check for obstructions before operating equipment.
- Always operate equipment slowly and carefully.
- Always keep clear of moving parts and blades.
- Always operate equipment in a safe and controlled manner.

- Failure to follow these instructions can result in serious injury or death.

[Diagram showing safety decals on the left and right sides of the equipment]
- Red reflective decal
- Left side
- Right side

**WARNING**
- Falling off can result in losing control of equipment.
- Always wear appropriate safety gear, including hard hat, safety glasses, and hearing protection.
- Always follow instructions when lifting and lowering equipment.
- Always ensure that all safety chains are engaged before operating equipment.
- Always maintain equipment in good working condition.
- Always follow instructions when operating equipment.

- Failure to follow these instructions can result in serious injury or death.
Safety decals, decks; replace immediately if damaged.
Safety decals, PTO shafts; replace immediately if damaged.
3 - OPERATION

You have purchased the ideal machine for large estate owners, golf courses, sport fields, parks and any large acreage mowing need. The Ez-Flex is a three point hitch gang grooming mower. It consists of a frame, mechanically connecting a trio of rear discharge grooming mowers. Each individual mower is attached by a double floating hitch allowing each deck to work independently from the other. Four wheels on each deck ensure a constant cutting height even over unlevel terrain.

Cyclone Ez-Flex can be used on tractors with horsepower ranging from 25 to 60 and it can be front or rear mounted. The 112-EZF has a working width of 12' and the 115-EZF has a working width of 14'. On both models the working width can be adjusted in or out depending on the desired amount of deck overlap. The tractor PTO is connected, through a driveline, to a 4 way splitter gearbox. The side and rear output shafts transfer power to the individual speed multiplier gearboxes on each mower. The main driveline comes equipped with a slip clutch.

The 112-EZF consists of two 4' wing units and one 6' central unit while the 115-EZF consists of two 5' wing units and one 6' central unit. Each individual mower works completely independent from the others. They are connected to the frame by floating arms. All mowers have four wheels allowing free floating over uneven terrain. Even over rolling ground, the cut is accurate and uniform.

After mowing, during transport and for storage or maintenance, all three mowers can be raised up hydraulically to a vertical position. During transport or maintenance operations, it is imperative to be sure the wing mowers are locked in place with the automatic locking system. To transport over extended distances, the wings should be locked in their 90 degree vertical position with the transport locks and the metal transport brace added to the two wing units for added safety. The raised mower in the properly secured transport position can be transported on public roads as a normal three point implement when adhering to local traffic laws.

The Ez-Flex is ideal for bi-directional tractors. After mowing with the Ez-Flex in the front position, the tractor seat can be turned 180 degrees putting the mower behind the driver for easy transport on roads.

The decks can be raised for easy cleaning and quick blade changes. Top grease fittings make the greasing of hubs and spindles simple and fast.

The Cyclone Ez-Flex represents the most advanced proposal for reducing labor cost without sacrificing quality of cut. The high cutting speed of 8-10 mph along with a wide working width, allows for a reduction in man-hours and lower fuel cost for the maintenance of large grass areas.

Although the mower features a wide cutting width, the decks can be hydraulically folded to almost 90 degrees, allowing the Ez-Flex to become extremely compact and easy to maneuver on roads, being three point mounted and closed coupled to the tractor.

Options are available for the Ez-Flex, such as mulching kits for grass and leaves and a hydraulic unlock kit. The mower comes standard with a front anti-scalp roller for uneven ground contours.
3.01 - Operational Safety

CAUTION: Our mowers are designed considering safety as the most important aspect and are the safest available in today's market. Unfortunately, human carelessness can override the safety features built into our machines. Injury prevention and work safety, aside from the features on our mowers, are very much due to the responsible use of the equipment. It must always be operated prudently following with great care, the safety instructions laid out in this manual.

1. The use of this equipment is subject to certain hazards which cannot be prevented by mechanical means or product design. All operators of this equipment must read and understand this entire manual, paying particular attention to safety and operating instructions, prior to using.
2. Do not operate the tractor and mower when you are tired, sick or when using medication.
3. Keep all helpers and bystanders at least several hundred feet from a rotary mower. Only properly trained people should operate this machine.
4. The majority of accidents involve entanglements on the driveline, injury of bystanders by objects thrown by the rotating blades, and operators being knocked off the tractor by low hanging limbs and then being run over by the mower. Accidents are most likely to occur with machines that are loaned or rented to someone who has not read the operator's manual and is not familiar with a rotary mower.
5. Always stop the tractor, set brake, shut off the tractor engine, remove the ignition key, lower implement to the ground and allow mower blades to come to a complete stop before dismounting tractor. Never leave equipment unattended with the tractor running.
6. Never place hands or feet under mower with tractor engine running or before you are sure all motion has stopped. Stay clear of all moving parts.
7. Do not allow riders on the mower or tractor at any time. There is no safe place for riders.
8. Do not operate unless all personnel, livestock and pets are several hundred feet away to prevent injury by thrown objects.
9. Before backing up, disengage the mower and look behind carefully.
10. Install and secure all guards and shields before starting or operating.
11. Keep hands, feet, hair and clothing away from moving parts.
12. This rotary mower is designed for use only on tractors with 540 rpm power take off.
13. Never operate tractor and mower under trees with low hanging limbs. Operators can be knocked off the tractor and then run over by the rotating blades.
14. The rotating parts of this machine have been designed and tested for rugged use. However, they could fail upon impact with heavy, solid objects such as steel guard
rails and concrete abutments. Such impact could cause the broken objects to be
thrown outward at very high velocities. To reduce the possibility of property damage,
serious injury, or even death, never allow the cutting blades to contact such
obstacles.
15. Frequently check mower blades. They should be sharp, free of nicks and cracks and
securely fastened.
16. Stop mower immediately upon striking an obstruction. Turn engine off, remove key,
inspect and repair any damage before resuming operation.
17. Stay alert for holes, rocks and roots in the terrain and other hidden hazards. Keep
away from drop-offs.
18. Use extreme care and maintain minimum ground speed when transporting on
hillside, over rough ground and when operating close to ditches or fences. Be
careful when turning sharp corners.
19. Reduce speed on slopes and sharp turns to minimize tipping or loss of control. Be
careful when changing directions on slopes. Do not start or stop suddenly on slopes.
Avoid operation on steep slopes.
20. When using a unit, a minimum 20% of tractor and equipment weight must be on
tractor front wheels. Without this weight, tractor could tip over, causing personal
injury or death. The weight may be attained with a front end loader, front wheel
weights, ballast in tires or front tractor weights. When attaining a minimum 20% of
tractor and equipment weight on the front wheels, you must not exceed the ROPS
weight certification. Weigh the tractor and equipment. Do not guess or estimate!
21. Inspect the entire machine periodically\(^2\). Look for loose fasteners, worn or broken
parts, and leaky or loose fittings.
22. Use only the driveline supplied with the mower. Do not use it if it is missing any
shield or safety protection.
23. Pass diagonally through sharp dips and avoid sharp drops to prevent “hanging up”
tractor and mower.
24. Avoid sudden starts and stops while traveling up or downhill.
25. Always cut down slopes; never across the face. Avoid operation on steep slopes.
    Slow down on sharp turns and slopes to prevent tipping and/or loss of control.

3.02 - Setup and Assembly Instructions

Notice to dealer: Pre-delivery setup and service including lubrication is the
responsibility of the authorized dealer. It is up to him to assure that the machine is in
perfect condition and ready to be used. It is his responsibility to ensure that the
customer is aware of all safety aspects and operational procedures for the mower. He
must also fill out the Pre-Delivery Checklist\(^3\) prior to delivering the mower.

At times, due to loading restraints the mower is shipped either with the three decks
separate from the frame or fully assembled but with the telescopic wing arms retracted.
**It is the dealer’s responsibility to extend the telescopic wing arms to proper
operating width and to ensure final assembly of the mower.**

\(^2\) See Chapter 4 - Maintenance.
\(^3\) See Chapter 7 - Pre-Delivery Checklist.
CAUTION: Stand clear of bands when cutting as they could be under sufficient tension to cause them to fly loose. Take care in removing bands and wire, they often have extremely sharp edges and cut very easily.

To hook the three mowers to the central frame, do the following:

1. Position the decks complete with hitches (see #8, fig. 4) near the telescopic wing arms (see #1, fig. 4) which are bolted into the lift arms.

2. Insert the attaching pin (see #7, fig. 4) into the tube welded to the hitch (see #9, fig. 4). Place the shim washers (see #5, fig. 4) on either end of the attaching pin.

3. Place the two formed plates (see #3, fig. 4) on either end of the attaching pin (see #7, fig. 4) with the bend facing outward.

4. With the wing arms down level with the mower decks, position the telescopic wing arms (see #1, fig. 4) between the two formed plates (see #3, fig. 4). Attach them to the bolts (see #10, fig. 4) provided. Be sure to use the spacer plates (see #2, fig. 4) between the wing arm and each formed plate.

5. Tighten the nuts (see #4, fig. 4) and bolts (see #10, fig. 4). Ensure after tightening that the formed plates (see #3, fig. 4) move freely up and down over the attaching pin (see #7, fig. 4).
6. Using the grease fitting on the hitch (see #6, fig. 4), grease the attaching pin and formed plate.

### 3.03 - Cutting Height Adjustment

**WARNING:** Keep hands and feet away from moving blades. Be sure the tractor engine is off, parking brake is locked, and key is removed before making any adjustments. Never rely on the hydraulic system to hold the weight of the raised mowers. Never walk or work under the raised mowers without first making sure the automatic locking system is securely holding the wing units with the hydraulic cylinders closed, and the hook is engaged to support the rear deck.

The cutting height is the distance from the blades to the ground. The cutting height is adjusted by moving the height adjustment spacers on the wheel yokes above or below the wheel arm. Placing spacers between the wheel arm and the wheel yoke raises the cutting height by the size of the spacer. Removing the spacers lowers it by the same height (see fig. 5). All the wheel yokes are supplied with two different size height adjustment spacers, ½” and 1”.

![Fig. 5](image)

*The cutting height is adjusted by moving the height adjustment spacers on the wheel yokes above or below the wheel arm.*

Be sure all 12 wheels of the mowers are adjusted equally. This is the only way to ensure a completely uniform cut.
IMPORTANT: Very low cutting heights should be avoided. Damaging shock loads occur when the blades strike the ground repeatedly. This can cause damage to the mower.

Cutting lower than 2" under most circumstances should be avoided. The cutting height is adjustable from 1" to 4".

Anti-scalping rollers come standard on each deck for uneven ground contours. The roller rides the nose of the mower deck over a mound to help keep the nose from bulldozing or the blade from scalping the ground. The roller is extremely helpful when mowing height is set below 2”.

3.04 - Pre-Operational Check

IMPORTANT: Check each of the following, carefully, prior to engaging the equipment:
1. The spindle bearings have been greased.
2. The belts for proper tension.
3. The oil in the gearboxes.
4. The drivelines cross and bearings have been greased.
5. All wheels are fully greased.
6. All grease points on Ez-Flex frame have been greased.
7. No wrappings or foreign objects are around the blades, belts or drivelines.
8. The blades are properly installed and the blade bolts properly torqued.
9. All hardware is tight.
10. The tractor, to ensure correct direction of PTO and rpm speed.
11. All safety shields and guards are in place and tightly attached.
12. No people or animals are in the work area.
13. The Ez-Flex frame is connected to the tractor three point hitch and adjusted in a way that allows all three mowers to float freely and follow the ground contour.

DANGER: Stay clear of rotating driveline. Entanglement in rotating driveline can cause serious injury. Disengage PTO, engage parking brake or place transmission in “Park”, shut off the tractor and remove the key before working around hitch, attaching or detaching driveline, making adjustments, servicing or cleaning the machine.

3.05 - Attaching to the Tractor

The Ez-Flex may be used on any 540 rpm tractor with a universal three point hitch and horsepower ranging from 25 to 60. The tractor must be able to lift easily and safely the weight of the machine (the 112-EZF weighs 1,870 lbs. and the 115-EZF weighs 2,112 lbs.)
lbs.). It is important to verify, if it necessary to add extra weights for stability. These should be added in either the front or rear of the tractor opposite to where the mower is mounted.

⚠️

**CAUTION:** Check the tractor PTO rpm to ensure it is set at 540 rpm and turns clockwise. Always ensure that the tractor tire pressure is correct according to the tractor operator’s manual.

**To attach the mower to the tractor do the following:**

1. Back the tractor up to the mower in order to slip the tractor hitch arms into the yokes of the Ez-Flex lift arms. **Turn off the tractor engine.** Insert the pins through the yokes and tractor hitch arms. Secure them in place with the lynch pins.
2. Adjust the tractor sway blocks or chains to remove all side movement.
3. Attach the top link and secure it in place with the top hitch pin.
4. Attach the hydraulic hose connection from the mower to the tractor’s remote port.
5. Install the shielded driveline to the tractor and mower, with the slip clutch end going to the splitter gearbox. Install the driveline by first lining up the splines and depressing the snap pin. Push the yoke onto the PTO shaft as far as it will go. Release the pin and pull back slowly until the pin clicks in place. Repeat on the other end. Check PTO length.
6. Attach the driveline chains to the tractor and to the mower to keep the driveline protection from turning. The chains should not be tight.
7. Turn on the tractor and raise the gang mower with the tractor lift arms in order to position the mower stands into the working position.
8. If the mower is in the transport position, remove the transport bar bolted to the two wing mowers and lower the transport locks holding them in the 90 degree position. **Do not stand or allow anyone to stand under any of the three mowers while continuing the following instructions.**
9. Lower the three mowing decks by first raising the decks with the tractor hydraulics, unhook the decks, and then release the hydraulics to allow them to fall freely.
10. Raise and lower the three decks a few times to ensure the hydraulic system is working properly.
11. Before mowing be sure there is no pressure on the hydraulic system to allow the mowers to float freely.
12. Adjust the top link so the frame is as parallel to the ground as possible in order to give the decks free movement.
13. Engage the tractor PTO. Feather in the PTO to prevent damage to the driveline, gearboxes, etc.

⚠️

**DANGER:** Never engage the PTO until all three mowers are in the down position and resting on the ground. Never raise the mowers until all three deck blades

---

7 See Section 4.06 - Driveline and Center Gearbox Timing.
have come to a complete stop. Doing so will cause damage to the driveline yokes and/or cross and bearings and can create a situation which endangers the operator or bystanders.

### 3.06 - Hydraulic Lift System

Standard single action lift cylinders are used on the Ez-Flex frame. They come with in-line restrictors to prevent a sudden drop if the hydraulics fail.

⚠️ **DANGER:** Never use hydraulics without the restrictors installed.

For correct operation, the lift cylinders for all three mowers must be completely extended and relieved of pressure. This is done by assuring the tractor hydraulic remote system is in the float position. See your tractor operator’s manual for correct procedure on how to operate single action hydraulic cylinders and most importantly on how to hold the tractor remote supply in “Float”. **The “Float” setting is critical for the proper function of the Ez-Flex mower.** Both wing mowers and rear mower must have free up and down movement for correct operation on uneven terrain.

### 3.07 - Frame Adjustments

The main function of the Ez-Flex frame is to allow the three mowing units to follow the ground contour and float freely and independently from each other. In order to achieve a perfectly uniform cut, it is important that all three mowers rest completely on the ground at all times with all of their four wheels touching the ground. This ensures that each individual mower cuts level and maintains a uniform cut along the entire cutting width of the machine. The free floating capability of the mower is indispensable when cutting with gang mowers.

The three units are connected to the frame by a double pivot setup. The first pivot point is at the hinged point of the frame arms, the second at the slotted connection between the telescopic arms and the mowers. This double effect gives side to side and up and down movement to all three mowers allowing each one the freedom to follow the ground contour without limitations from the frame. This articulating free floating system would not be possible without the complete release of all hydraulic pressure as you will see with the other important frame adjustments.

**Telescopic Arms**

The two wing mowers are connected to the frame with two adjustable telescopic arms each. This unique feature, available only on our mower, allows the wing decks to telescope in and out for additional overlap. Holes are provided for this purpose (see #1, fig. 6). This is done by removing the retaining bolt and sliding the wing frame in or out.

---

8 See Section 4.06 - Drivelines and Center Gearbox Timing, prior to adjusting overlap width.
to the desired position (see fig. 6). You may choose to drill holes for additional adjustment positions.

Important: Always check PTO length when adjusting the deck overlap.

![Fig. 6 - Wing unit.](image)
1. holes provided to increase or decrease mower overlap
2. pivot pin
3. stamped plate

As the wing units, the central unit is also assembled to the frame with telescopic arms that are adjustable in several positions allowing the mower to be front or rear mounted (see #1, fig. 7).

![Fig. 7 - Central unit.](image)
The holes (#1) on the telescopic arms of the central unit allow the Ez-Flex to be either front or rear mounted.
Leveling Flex Frame
The second pivot point is where the telescopic arms connect to the mowers. Each deck has two pins, one in the front and one in the rear, nested between two stamped plates with large slots. The plates are attached to each of the frame arms with three bolts. As the mower floats over the ground, the slots allow it to follow the ground contour without interference (see fig. 8).

It is best to make leveling adjustments with the tractor and mower on flat ground. Lower all three mowing decks ensuring the hydraulic pressure from the tractor is completely released.

Fig. 8
The arrow shows the pin centered in the rectangular plates bolted to the end of the telescopic arm. Both the front and rear arm must be in this position.

Fig. 9 - Central mowing unit.
1. locking hook with 2 positions
2. hydraulic cylinder
3. wing arm
4. stamped plate with pivoting pin
The frame is level when all three decks have each of their two pins in approximately the same position in relation to the slots in the stamped plates which are attached to the telescopic arms (see fig. 8).
Adjust the tractor top link or the tractor lift arms to level the frame.
Once the frame is level, lock the tractor arms into place.

Be sure the main PTO driveline is not in a bind and is running as straight as possible.
Under extreme conditions where the mowing decks may drop down a considerable distance below the frame, and there is the possibility of the mowing deck drivelines contacting the frame, it is best to adjust the frame in the lowest position possible.

---

**Fig. 10**
1. central mowing unit
2. hydraulic cylinder
3. stamped plate
4. wing arm
5. stand
6. draw bar
7. gearbox
8. wheel arm

---

**Raising the Mower Decks and the Automatic Lock up System**
To lock the mower decks into a secure position, do the following: Raise the three decks by means of the tractor hydraulics until the three locking hooks (see #2, fig. 11) ride up
over the locking pins (see #1, fig. 11) and rear mounting bracket. Allow the mowers to float back down so the crook of the locking hooks sit securely over the pins and bracket. The locking hook for the center mower has two positions (see #1, fig. 9). This first position gives the driver better visibility when transporting a front mounted mower. The second position is advisable to transport a rear mounted mower. This will make the entire unit more compact.

Once the mower decks are raised, it is possible to lock the wings in a 90 degree vertical position for transport safety. Manually rotate the wing decks, they will pivot on the front
and rear draw bars (see #9, fig. 11) up enough for the transport lock (see #4, fig. 11) to be positioned under the wing arm (see #3, fig. 11). Bolt the metal transport brace (see #5, fig. 11) into the holes in the front draw bars for added safety when the wing units are in the 90 degree vertical position.

**To lower the mowers, proceed as follows:**
Raise the three decks with the tractor hydraulics. When they are fully raised, pull the rope (see #10, fig. 11) tied to the unlocking lever (this will pull the hooks away from the pins and mounting bracket), and lower the decks with the tractor hydraulics. Release the rope once the pins and mounting bracket are past the hooks. In the event that the three springs have stretched to the point that they are unable to maintain good downward pressure and keep the hooks in place, operator must move the hook of the springs to a lower hole to provide greater spring tension.

**3.08 - Start Up**

⚠️ **WARNING:** Never engage the PTO until all three mowers are in the down position and resting on the ground. Never raise the mowers until all three deck blades have come to a complete stop. Doing so will cause damage to the driveline yokes and/or cross and bearings and can create a situation which endangers the operator or bystanders.

Before engaging the Ez-Flex mower, ensure that all twelve mower tires are firmly on the ground and the frame level as indicated above.

With the engine idling, slowly engage the PTO drive. Move the throttle lever until the PTO speed indicated on the mower is obtained. **Sharp and sudden engagement of the PTO at high speeds can damage the gearbox and driveline components.** The mower is set for a PTO speed of 540 rpm. Shift the transmission to a slow speed gear and start forward, increase the ground speed by shifting upward until the desired speed is obtained. Do not mow in reverse unless absolutely necessary and only after careful observation of the area behind the mower.

⚠️ **CAUTION:** Do not operate this mower at a PTO speed or direction of rotation other than that shown on the mower. Serious damage can occur to the machine and/or the operator.

---

9 In the place of the pull rope (see #10, fig. 11), a hydraulic cylinder is available for automatically unhooking the three mowing decks.

10 See Leveling Ez-Flex Frame in section 3.07 - Frame Adjustments.
CAUTION: Before mowing check area for stones, branches and other debris that might be thrown.

Before starting to mow, never forget that the **operator is responsible** for the following:
1. Safe and correct driving of the tractor and mower.
2. To learn precise, safe operating procedures for both the tractor and the mower.
3. To ensure all maintenance and lubrication has been performed on the mower.
4. To have read and understood all safety aspects for the mower in the operator's manual.
5. To have read and understood all safety decals on the mower.
6. Checking the condition of the blades. Worn or damaged blades should be changed before starting\textsuperscript{11}.
7. Checking to ensure that the cutting edge is the leading edge of the blade.
8. Checking that there is no wire, weed, grass or other material wrapped around blades.
9. Checking to see if front weights to be added to the tractor in order to maintain balance.
10. Checking the tractor tires for the proper pressure in accordance with the tractor operator's manual.
11. **Checking that the PTO shield, belt shields and all other shielding are on the machine and securely in place.**
12. Making sure the proper attire is worn. Avoiding loose fitting clothing which can become entangled. Wearing sturdy, tough-soled work shoes and protective equipment for eyes, hands, ears and head. Never operate tractor or implements in bare feet, sandals or sneakers.
13. Checking area for stones, branches and other debris that might be thrown.
14. Ensuring proper lighting is available, sunlight or good artificial lighting.

### 3.09 - Working Speed

The mowing speed depends on ground conditions, tractor HP, mowing height and grass thickness. Only a test run will enable you to gauge the optimal working speed for your conditions.

Under most conditions a 4 to 7 mph ground speed is best. As a rule of thumb and if the conditions permit, grass dispersion is increased by higher ground speeds.

In order to obtain the best cut possible, always keep the tractor to 540 rpm. When increasing or decreasing mowing ground speed, always use gear selection, not engine speed. This will maintain the constant maximum blade speed necessary for a clean cut.

The mulching kit is an option available for our mowers. This kit, containing 3 multilevel cutting edge blades and add-on containment baffling which bolts to the underside of the mower deck, mulches and pulverizes grass and leaves.

\textsuperscript{11} See Section 4.03 - Blade Maintenance, for details.
Another benefit of the mulching kit is safety. In fact, the kit greatly reduces the possibility of thrown objects. This is particularly important when mowing around schools, public parks and golf courses. If you are using a **mulching kit**, you need to reduce your ground speed to under 2 mph (see fig. 12).

![Mulching Kit Diagram](image)

**Fig. 12**

*The mulching kit is an available option, consisting in 3 multilevel cutting edge blades and add-on containment baffling which bolts to the underside of the mower deck, to mulch and pulverize grass and leaves.*

### 3.10 - Operating Techniques

All of the following factors are important in selecting the proper forward speed:

1. Height of grass.
2. Type of grass.
3. Density of grass.
4. Type of terrain.
5. Grass condition, wet or dry.
6. Type of blades.

This mower has been designed to cut grass with heights from 4" to 8". It is recommended to avoid cutting grass taller than 10". For the best results, try cutting the grass at least once per week during growing season. Tall, dense grass should be cut at low speed, while thin medium grass can be cut at a faster ground speed. For cleaner cuts and efficient mowing, the blades must be kept sharp. Always operate PTO at 540 rpm. This is necessary to maintain proper blade speed and obtain a clean cut.

---

12 See Sharpening Blades in Section 4.03 - Blade Maintenance.
Under certain conditions, tractor tires may roll some grass down and prevent it from being cut at the same height as the surrounding area. If this occurs reduce the tractor ground speed but maintain a 540 rpm engine speed. The lower ground speed will permit the grass to at least partially rebound. Under some conditions grass will not rebound enough to be cut evenly, resulting in an uneven appearance. In general, lower cutting height gives a more even cut with less tendency to leave tire tracks. If cut is still not satisfactory, cut the area twice.

Mow extremely tall grass twice. On the first pass use a high cutting height. On the second pass position the mower at the desired height and, when practical, mow at a right angle in travel to the first pass.

Plan your pattern to travel straight forward whenever possible.
It is better to cut grass more often, than too short. Short grass deteriorates rapidly in hot weather and invites weed growth during growing season.

If at any time the mower should jam resulting in belt slippage of 2 or more seconds, raise the mower and continue for 2-3 minutes. This will allow the pulleys to cool and prolong belt life.

Because of the size and high cutting speed of the Ez-Flex mower, it is extremely important that the operator becomes familiar with its width while mowing around trees, buildings, etc. Since the Ez-Flex mower cuts better at higher speeds it is indispensable that the operator knows the mower before entering into areas where trees, fences, curbs and other obstacles can be hit.

⚠️
DANGER: The mower blades can throw objects hundreds of feet which could result in personal or property damage. Pick up all rocks and other debris before mowing. Enter new areas carefully. Cut grass higher at first, allowing mower to clear hidden objects.

⚠️
CAUTION: For emergency reasons learn how to stop the tractor and mower quickly. On the finishing mowers always disengage the PTO, lock parking brake, stop engine and allow the mower blades to come to a complete stop before dismounting the tractor.

3.11 - Uneven Terrain

⚠️
DANGER: Be careful of rollover when operating tractor and mower over uneven ground.
The following precautions should always be observed when working on uneven terrain:
1. In extremely uneven terrain rear wheel weights, front tractor weights, and/or tire ballast should be used to improve stability.
2. Observe the type of terrain and develop a safe working pattern.
3. Whenever traction or stability is doubtful, first test drive over the terrain with the PTO disengaged.
4. Operate the implement up and down steep slopes, not across slopes, to prevent the tractor from tipping. Avoid sudden stops and starts, and slow down before changing directions on a slope.
5. Pass diagonally through sharp dips and avoid sharp drops to prevent hanging up the tractor and implement.
6. Slow down on sharp turns and slopes to prevent tipping or loss of control.
7. Avoid tipping the mower while cutting.
8. Watch for holes, roots or other hidden objects. Do not use near the edge of a gully, ditch or stream bank.
9. Always insert transport tires on unit before transporting on uneven terrain.

Anti-scalping rollers are mounted on each deck for uneven ground contours. The roller rides the nose of the mower over a mound to help keep the nose from bulldozing or the blades from scalping the ground.

3.12 - Unhooking the Mower

To unhook the mower from the tractor do the following:
1. Disengage the tractor PTO.
2. Be sure the mowers have come to a complete stop. Raise all three mowing decks with the tractor hydraulics until each deck's automatic locking hook is securely in place.
3. Engage the tractor's hand brake and turn off the tractor engine. Remove the key before getting off the tractor.
4. Lower the two parking stands and insert the two transport tires into position and lower the tractor arms until the mower rests on the ground.
5. Position the transport locks on the two wing decks so they are at 90 degrees.
6. Install the transport brace with the proper bolts to anchor the wing decks together.
7. Remove the main PTO driveline and store it in a clean location to prevent damage.
8. Unhook the mower from the tractor's three point hitch.
9. Slowly drive the tractor away from the mower.

3.13 - Transport

CAUTION: Comply with state and local laws governing safety and movement of farm machinery on public roads. When driving the tractor and equipment on the
road under 20 mph, at night or during the day, use flashing amber warning lights and a Slow Moving Vehicle (SMV) identification emblem. Do not exceed 20 mph. Reduce speed on rough roads and surfaces. Always install transport locks before transporting the mower. Drive tractor and mower safely. Do not drink and drive.

Before transporting the Ez-Flex, it is important to shorten the tractor top hitch as much as possible in order to keep the mower from bouncing. Excessive bounce during transport can damage the three point hitch and frame of the mower and tractor. Raise the mower making sure the PTO drive shaft does not hit against the frame or the tractor. During transport, the mower frame should not be lower than 15” from the ground.

The Ez-Flex can be transported over most roads as a standard three point hitch equipment following local transportation rules and regulations. When transporting, always maintain a safe speed and slow down when approaching turns.

To transport the Ez-Flex:
1. Stop the tractor, leave the engine running and disengage the tractor PTO.
2. Be sure the blades have come to a complete stop before continuing.
3. Set the parking brake.
4. Raise the three decks by means of the tractor’s hydraulics until the three locking hooks ride up over the locking pins and rear mounting bracket.
5. Allow the mowers to float back down so the crook of the locking hooks sit securely over the pins and bracket.
6. Only transport very short distances this way.
7. Do not trust the hydraulics alone except for extremely short distances, such as between trees, over bridges, etc., and only when you are sure no bystanders are near.
8. To transport over extended distances insert the two transport wheels and secure the wing units in place with the transport brace provided. This will keep the wing units in a vertical position and cut down dramatically on the transport width.

The new and improved frame of the Ez-Flex is designed to facilitate transportation of the unit to and from working locations. The transport frame will easily attach and be raised by the majority of 50 HP or plus tractors. However, if you are using the implement with smaller tractors or if you are transporting over extended distances the added transport tires can be easily assembled and allow the weight of the machine to be absorbed by the tires instead of the tractor’s three point hitch.
To insert the transport tires into the frame, raise the implement a couple of inches above the ground and slide the wheel arms into the specifically designed hole on the frame (see fig. 13). If the tractor does not have sufficient power to raise the unit, then it can be raised by using the jack provided (see fig. 14).
To insert transport tires, raise unit a couple of inches and slide the wheel arms into the frame.

If you are using the Ez-Flex with a smaller tractor, a jack is provided to raise the unit in order to facilitate the assembly of the transport tires.
DANGER: Raise the three mower decks with the tractor hydraulics. Be sure all three automatic locking hooks are securely in place. Place the wing units in their 90 degree vertical position with the transport locks (see #4, fig. 11). Stop the engine, lock parking brake and remove key and bolt on the transport brace (see #5, fig. 11). Never rely on the hydraulics alone to support the raised decks. Always use gloves and safety glasses when performing any maintenance. Keep fingers out of slots to prevent injury.

4.01 - Maintenance Safety

1. Good maintenance is your responsibility.
2. Keep service area clean and dry. Be sure electrical outlets and tools are properly grounded. Use adequate light for the job at hand.
3. Make sure there is plenty of ventilation. Never operate the engine of the towing vehicle in a closed building. The exhaust fumes may cause asphyxiation.
4. Make no repair or adjustments with the tractor engine running. Before working on the machine, disengage the PTO, shut off the engine, set the brakes, and remove the ignition key.
5. Be certain all moving parts on attachment have come to a complete stop before attempting to perform maintenance.
6. Never work under equipment unless it is blocked securely.
7. Never trust the hydraulic pressure alone to maintain the mowers in the raised position. When servicing the Ez-Flex with the mowers in the raised positions always lock the wings with the three automatic locking hooks and bolt the transport brace (see fig. 11).
8. Always use personal protection devices such as eye, hand and hearing protectors, when performing any service or maintenance.
9. Frequently check mower blades. They should be sharp, free of nicks and cracks and securely fastened.
10. Periodically tighten all bolts, nuts and screws and check that all cotter pins are properly installed to ensure unit is in a safe condition.
11. Remove hydraulic pressure prior to doing any maintenance.
12. Never use your hands to locate a hydraulic leak on attachments. Use a small piece of cardboard or wood. Hydraulic fluid escaping under pressure can penetrate the skin.
13. When disconnecting hydraulic lines, shut off hydraulic supply and relieve all hydraulic pressure.
14. Do not attempt to mount a tire unless you have the proper equipment and experience to do the job.
15. Inflating or servicing tires can be dangerous. Whenever possible, trained personnel should be called to service and/or mount tires.
16. When completing a maintenance or service function, make sure all safety shields and devices are installed before placing unit in service.
17. After servicing, be sure all tools, parts and service equipment are removed.
18. Be sure to lock the tractor brake and either lock the wings with the transport brace or lower the mowers to the ground when completing work.
19. Never replace hex bolts with less than grade five bolts unless otherwise specified, i.e., shear bolts\textsuperscript{13}.
20. Where replacement parts are necessary for periodic maintenance and servicing, genuine replacement parts must be used to restore your equipment to original specifications. The Company will not claim responsibility for use of unapproved parts and/or accessories and other damages as a result of their use.
21. Unauthorized modifications to the machine may impair the function and/or safety of the machine and reduce its life. If equipment has been altered in any way from original design, the manufacturer does not accept any liability for injury or warranty.

2.04 - Service

The accompanying illustrations show lubrication points. The chart gives the frequency of lubrication in hours, based on normal operating conditions. Severe or unusual conditions may require more frequent lubrication.

Use a good quality SAE multipurpose type grease for all locations shown. Be sure to clean fittings thoroughly before using grease gun.

Use 90 wt. or 140 wt. gear oil in gearboxes.

**Hourly:**
1. Check the condition of mower blades for nicks or dull edges. Sharpen if necessary.
2. Replace bent or damaged blades\textsuperscript{14}.
3. Also check blades for damage after hitting an obstruction.
4. Clean foreign material from mower deck and belt area.

**Every 8 hours:**
1. **Lubricate drivelines, caster wheels, wheel yokes and frame pivot points:** apply two or three shots of grease to the driveline cross and bearings and the telescoping shafts; apply the same amount to the wheels, the wheel arm grease fittings (see fig. 15) and the frame grease fittings (see fig. 16, #1-6 for lubrication points). See the driveline manufacturer operator’s manual for further information on the drivelines.
2. **Gearbox oil level:** check gearboxes’ oil level, it should be between $\frac{1}{2}$ and $\frac{2}{3}$ full. If needed add either SAE 90 wt. or SAE 140 wt. gear oil.

\textsuperscript{13} Refer to Table 1 - Torque Specifications, for head identification marking, page 40.
\textsuperscript{14} See Removing Blades in Section 4.03 - Blade Maintenance, for details.
Every 25 hours:
**Check hardware tightness;** mower vibration can loosen bolts\(^{15}\). Check tightness of the hardware periodically, using **Table 1** as a guide.

\(^{15}\) Table 1 gives the correct torque values for various bolts and nuts, page 40.
Every 50 hours:
1. Lubricate the nine spindles with two or three shots of multipurpose grease (see fig. 17). The top grease fittings are easily accessible from the top of the deck by simply removing the plastic dust guards.
2. Check belt tension\(^\text{16}\).

![Fig. 17](image)

_Lubrication of the spindle shafts easily accessible from the top of the deck._

Every 250 hours or at least once a year:
Hand pack with fresh grease the main carrier wheel bearings on the EZ-Flex frame.

### 4.03 - Blade Maintenance

**WARNING:** To avoid possible injury always wear proper eye and hand protection when servicing mower blade.

In order for the mower to work properly, and to always obtain a precision cut with lower HP requirements thus keeping cost down, proper blade maintenance is important. Blades must be kept sharp, at their original length and corners maintained. A blade must be replaced if, due to wear or damage, its original shape has been distorted.

#### Installing or removing blades
If the mower blades need to be installed, do the following:
1. The blade turns in a **counter clockwise** direction when viewed from the bottom of the deck. The cutting edge must be towards the direction of rotation. The lift wing of the blades is closest to the deck and the cutting edge away from it (see fig. 18).
2. Install the cup washer (see fig. 18) over the blade bolt and secure the blade in place as described above.
3. With a wrench, block the spindle and tighten the bolt to 103 lb. ft. (see fig. 19).

---

\(^{16}\) See Section 4.04 - Belt Tension, for details.
4. To remove the blades reverse the procedure.

⚠️

**WARNING:** Do not substitute blades or any bolt for the blade retaining bolt. Company blades and blade retaining bolts are specially made for this application. Using non original parts can effect the quality of cut and may also cause damage to the mower.

*Mower’s spindle assembly.*

![Diagram of mower's spindle assembly]

**Fig. 18**

1. grease fitting
2. hexagonal nut
3. pulley
4. rotor support
5. cover
6. shaft
7. blade
8. cup washer
9. blade bolt
10. cutting edge close to ground
11. lift wing

⚠️

**DANGER:** Proper torque must be used when tightening the blade retaining bolt. If these safety precautions are not followed, the blade could come off during operation and be thrown hundreds of feet from the mower.
Sharpening blades
Blade sharpening is extremely important in order to get the best cutting results. Sharp blades permit a high quality cut and also reduce HP thus lowering cost. To sharpen blades, first remove them following the above instructions. Place the blade in a vise and sharpen them by using a hand file or grinder. **Do not sharpen the blades to a sharp cutting edge.** The cutting edge should be between $\frac{1}{64}$" to $\frac{1}{32}$" to prevent excessive pitting and dulling of the blades. Sharpen both ends of the blade equally for balance and always maintain corners. Always keep all three blades sharpened equally in order to maintain balance.

![Diagram of mower components]

1. spindle  
2. blade  
3. blade bolt

**CAUTION:** Unbalanced or warped blades can cause damage to the mower and/or personal injury. Replace damaged blades before operating the mower. Sharpen both ends of the mower blades equally or until the blade is balanced.

4.04 - Belt Tension

**Belt tension control**
Check the belt tension by applying a force of 12-15 lb. pushing against the belt halfway between the pulleys. The belt deflection should be between $5\frac{5}{16}$" - $3\frac{3}{8}$".

**Belt tension adjustment**
The individual mowers have an automatic belt tensioner. The tension is created by a spring connecting a tensioner pulley to a fixed hitch plate with 3 positions (see fig. 20). Upon delivery, the spring is located in the first position. When the belt stretches after use, adjust the tension by relocating the spring in the other two holes. If the belt has stretched to the point that the belt is not tight enough even in the last hole, then it is necessary to replace the belt.
4.05 - Belt Replacement

If the belts have stretched or damaged to the point where the proper tension cannot be obtained they must be changed.

To replace the belt on each individual mower do the following:
1. Remove belt shields. Clean foreign material from the mower deck and belt area.
2. Release spring tensioner to loosen belt.
3. Loosen rear nuts holding central plate (do not remove them).
4. Remove front nuts holding central plate (see fig. 20).
5. Lift the front of the central plate and remove old belt.
6. Replace new belt starting from the right spindle pulley (see fig. 21).
7. Lower central plate. Replace front nuts. Tighten front and rear nuts holding down central plate.
8. Replace spring tensioner.
9. Check belt for proper tension.
10. Reinstall the belt shields.

4.06 - Drivelines and Center Gearbox Timing

⚠️ DANGER: Only use the original drivelines supplied with this mower and always with the safety shielding in place. Carefully read and file away the driveline operator’s manual supplied by the manufacturer. The following does not substitute the information found in the driveline manual.

Your Ez-Flex mower drivelines for the decks are cut to fit in order to deliver a maximum overlap when extended and without them bottoming out and damaging the mowers when the Ez-Flex is folded into its transport position. It is important to try and maintain approximately 2" from the two halves from bottoming out and a minimum of 6" overlap in the working position (see fig. 22).

<table>
<thead>
<tr>
<th></th>
<th>MAX.</th>
<th>MIN.</th>
</tr>
</thead>
<tbody>
<tr>
<td>min. 6&quot;</td>
<td></td>
<td></td>
</tr>
<tr>
<td>min. 2&quot;</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Fig. 22

IMPORTANT: If the wing mowers are moved in or out to change the overlap, or the drivelines are replaced with new ones, it is important to cut them to the proper length.

To determine the correct length do the following:

1. Separate the two driveline halves. Connect one half to the center splitter gearbox and the other half to the mower gearbox.
2. Raise the mowers slowly with the hydraulics to the transport position. Hold the half shafts side by side and mark the desired length on the outer female tube guard leaving a 2" gap between the end of the guard tube and bell guard.

3. Cut off both guard tubes the same amount as marked in step 2.

4. Shorten both drive tubes to the same amount as guard tubes.

5. De-burr and clean filings from drive tubes and apply grease to outside of inner telescoping tube.

6. Reassemble the driveline halves. Raise and lower mowers again slowly to be sure drivelines do not bottom out in the shortest position.

7. Install both driveline safety chains.

If for any reason, such as when lubricating driveline sections, the wing unit drivelines are detached from the main center gearbox, extreme care must be used when reattaching to maintain the two side gearbox output shafts in a "timed" position. A "timed" position is a position where both the left and right wing universals are almost in line and allows the wings to fold up together in unison. If they are aligned at 90 degrees from one another, only one can fold up and the other yoke will be damaged by the hydraulics.

Tip: To accomplish this, make a mark on the center gearbox and on the driveline yoke before removing the left and right drivelines. When reattaching the drivelines be sure that these marks line up.

The main PTO driveline connecting the tractor PTO to the splitter gearbox must also be checked for the proper length. This should be done with the mower up in the transport position and with the mower decks down in the working position.

**4.07 - Safety Slip Clutch**

The main driveline is supplied with a safety slip clutch, it is important to ensure it is working properly. The slip clutch delivered with your machine is set at a specific torque for normal working conditions.

![Fig. 23 - Slip clutch yoke.](image)

1. spring
2. nut
If while working, the clutch slips frequently, the spring nuts need to be tightened ½ turn. Check the clutch after 600-800 ft., if necessary repeat the operation. If after tightening the nuts down and the clutch continues to slip, the discs will have to be replaced (see fig. 23). Follow the instructions in reverse, if while working under normal conditions the clutch does not slip at all.

⚠️

**CAUTION:** Check the tractor master shield over the PTO stub shaft. Make sure it is in good condition and fastened securely to the tractor. Purchase a new shield if old shield is damaged or missing. When you are using a driveline equipped with a slip clutch, ensure that the slip clutch shield is properly mounted to the gearbox and in good condition.

5 - REPAIR PROCEDURES

CAUTION: All repair procedures must be done by authorized dealerships. It is not recommended that untrained individuals perform any repair work. The following operations are detailed for qualified personnel only.

5.01 - Gearbox

To remove the gearbox from decks do the following:
1. Remove the belt guards.
2. Release the belt tensioner spring.
3. Remove the belt 17.
4. Remove the nut holding the pulley to the gearbox pinion shaft.
5. Remove the pulley.
6. Unbolt the nuts holding the gearbox to the central plate.
7. Remove gearbox.

If it is necessary to replace any part on the inside of the gearbox, it is important to replace oil seals or gaskets to ensure a tight fit when reassembling.

To replace the gearbox, follow the above instructions in reverse order.

5.02 - Blade Spindle

To remove a blade spindle:
1. Remove the belt 18.
2. Remove the nut holding the pulley to the spindle shaft (see fig. 16).
3. Remove the blades 19.
4. Unbolt the bolts holding the rotor support to the mower deck.
5. If necessary remove and replace the bearings from the rotor using presses or extractors.
6. Reassemble in reverse order ensuring that the nut securing the top pulley (see fig. 16) is tightened to 118 lb. ft.

---

17 See Section 4.05 - Belt Replacement.
18 See Section 4.05 - Belt Replacement.
19 See Section 4.03 - Blade Maintenance.
5.03 - Suggested Spare Parts

It is suggested that the following spare parts be kept on hand for the mower at all times to prevent a minor problem from delaying work.

5.04 - Storage

⚠️ CAUTION: Following operation, or when unhooking, stop the tractor, set the brakes, disengage the PTO, shut off the engine and remove the ignition key. Store the unit in an area away from human activity. Do not permit children to play on or around the stored unit. Make sure all parked machines are on a hard, level surface and engage all safety devices.

After seasonal use it is important to perform the following for prolonged storage:
1. Raise the mowers and lock them in place with the hooks and if possible the transport braces.
2. Lower the four stands.
3. Wash the mower carefully.
4. Inspect the mower and replace worn or damaged parts.
5. Tighten all hardware.
6. Grease all areas indicated under maintenance.
7. Loosen the belts if the mower is to be stored for an extended length of time.
8. Cover the mower from the elements in order to have it in perfect condition for the start of the next season.
## 6 - TROUBLESHOOTING

**WARNING:** Be sure tractor engine is off, parking brake is locked, and key is removed before making any adjustments.

7 - PRE-DELIVERY CHECKLIST

To the dealer: Inspect the machine thoroughly after assembly to assure it is functioning properly before delivering it to the customer. The following checklist is a reminder of points to cover. Check off each item as it is found satisfactory or after proper adjustment is made.

☐ Gearbox oil level.
☐ Guards and shield properly fastened.
☐ Lubrication of grease fittings.
☐ All hardware properly tightened.
☐ All decals properly located and readable (see fig. 3).
☐ Blades properly installed, blade bolts and nuts tightened.
☐ Overall condition (touch up scratches, clean and polish).
☐ Test run, check for excessive vibration or overheating of bearings.

Review the Operator’s Manual with the customer. Explain the following:

☐ Warranty.
☐ Safe operation and service.
☐ Correct machine installation and operation.
☐ Daily and periodic lubrication, maintenance and inspections.
☐ Troubleshooting.
☐ Operational procedures and storage.
☐ Parts and service.
☐ Fill out the Pre-Delivery Checklist and Warranty Registration form.
☐ Give customer the Operator’s Manual and encourage the customer to read the manual carefully.

IMPORTANT: Warranty is not valid unless Pre-Delivery Checklist and Warranty Registration form in Operator’s Manual is completed in detail and mailed to the Company.

Model Number: ___________  Serial Number: ___________

Delivery Date: ___________  Dealer’s Signature: ___________
8 - WARRANTY

BEFCO’s responsibility will be limited to substitution of the acknowledged defective merchandise to the same place of delivery as the previous one was supplied.

1. LIMITED WARRANTY

BEFCO, Inc. herein referred to as the Company, warrants its machines and related accessories, hereafter referred to as the Machine, to be free from defects in material and workmanship, for a period of twelve (12) months from the date of invoice to the first registered owner; this limited warranty does not apply to common wear items and excludes belts, shear pins, oil, grease, tires, tubes, hydraulic hoses, knives and PTO shafts.

Labor will be reimbursed at $40.00 per hour based on BEFCO’s time schedule.

Cost of transport to the servicing dealer is the responsibility of the customer.

Warranty coverage shall not be transferable from the first owner to any subsequent owner.

2. DISCLAIMER OF ALL OTHER WARRANTIES AND REMEDIES

Neither the Company nor any company affiliated with the Company makes any warranties, representations or promises, expressed or implied, as to the quality, performance or application of its products other than those set forth herein and does not make any implied warranty of merchantability or fitness.

The only remedies the purchaser has in connection with the breach, or performance of any warranty on the Company’s Machine are those set forth herein. In no event will the dealer, the Company, or any company affiliated with the Company, be liable for:

a. Injuries or damages of any kind or nature, direct, consequential or contingent to person or property.

b. Any expenses incurred by the owner to repair, replace or rework any allegedly defective item.

c. Any loss, cost, forfeiture or damages (including loss of profits; loss of crops; loss because of delay in field operations; any expenses or loss incurred for labor, supplies, substitute machine rental; liabilities of the owner to its customers or third persons; and all other consequential damages, losses, liabilities or damages for any other reasons) whether direct or indirect, and whether or not resulting from or contributed to by the default or negligence of the Company, its agents, employees and subcontractors which might be claimed as a result of the use or failure of the equipment delivered.

The Company’s liability based on this limited warranty or any other applicable laws shall be limited to replacement or refund of the purchase price of the product.

The limited warranty extended herein gives you specific rights and you may also have other rights which vary from state to state. Neither the dealer nor the Company personnel has the authority to make any representation or to modify the terms and limitations of this warranty in any way.
Other than the limited warranty extended hereby there is no other expressed warranty in connection with the design, safety or use of any of the Company's products except as to title. All implied warranties are expressly disclaimed pursuant to the terms of this warranty.

3. CUSTOM WORK
If the Machine is used for commercial purposes such as custom work, the period warranted for the Machine is limited to six (6) months from the date of delivery to the first registered owner and does not cover any labor charges incurred.

4. RENTAL
If the Machine is used for rental purposes the period warranted for the Machine is limited to thirty (30) days from the date of delivery to the first registered owner and does not cover any labor charges incurred.

5. REGISTRATION
In order to qualify for coverage on this limited warranty, the product and name of the original purchaser must be registered with the Company by a completed Machine Pre-Delivery Checklist and Warranty Registration along with a copy of the dealer's invoice to the first registered owner to the Company within fourteen (14) days after the date of delivery to the original purchaser.

6. WARRANTY SERVICE
Warranty Service must be performed by a dealer authorized by BEFCO. If the warranty service requested is approved, the owner shall pay only for labor beyond the rate allowed, for overtime labor, and for any mileage charge for transporting the equipment to and from the dealer’s shop. It is assumed that the dealer has the appropriate general and special tools to service the Machine. Time required for replacement of knives, oil, grease and to remove excessive dirt from the Machine is not subject to reimbursement by the Company. The owner is required to clean the Machine before presenting it to the dealer for service work. The Machine must be delivered within thirty (30) days after failure date by the owner to the dealer to be eligible for warranty consideration.

7. UNAPPROVED SERVICE OR MODIFICATION
All obligations of the Company under this limited warranty shall be terminated if:
   a. Proper service and operation instructions as outlined in the Operator’s Manual and on the instruction sticker on the Machine, are not followed.
   b. The Machine is modified or altered in any way not approved by the Company.
   c. The Company does not receive a copy of the dealers invoice to the first registered owner within fourteen (14) days from the date of delivery.
   d. The Company has not been paid in full, by the dealer, for the Machine.

8. ACCIDENTS AND NORMAL MAINTENANCE
This limited warranty covers defective material and workmanship. It does not cover depreciation or damage caused by normal wear, accidents, improper maintenance, improper protection or improper use. The costs of normal maintenance or repairs for accidents or improper use, and related labor will be borne by the owner.

9. REPLACEMENT PARTS
BEFCO, Inc. warrants replacement parts to be free from defect in material and workmanship for a period of thirty (30) days from the date of delivery to the original purchaser.
