## WARRANTY ................................................................. 35
OPERATOR’S MANUAL

You must read, understand and comply with all the safety and operating instructions in this manual before attempting to set-up and operate your power broom.

Failure to comply with the safety and operating instructions can result in loss of machine control, serious personal injury to you and/or bystanders, and risk of equipment and property damage.

IDENTIFICATION NUMBERS

When contacting your authorized dealer for information, replacement parts or service, you MUST have the model and serial number of your unit.

Record the serial number in the space provided. The serial number plate/decal can be found in the location shown in Figure 1.

SAFETY

SAFETY ALERTS
Signal words and alert symbols notify of important safety precautions.

DANGER! Indicates a hazardous situation which, if not avoided, will result in serious injury or death.

WARNING! Indicates a hazardous situation which, if not avoided, could result in serious injury or death.

CAUTION! Indicates a hazardous situation or unsafe practice which, if not avoided, could result in minor or moderate injury or property damage.

SAFETY DECALS
Although reading this manual and the safety instructions it contains will provide you with the necessary basic knowledge to operate this equipment safely and effectively, we have placed several safety labels on the unit to remind you of this important information while you are operating your unit.

All DANGER, WARNING, CAUTION, and instructional messages on your unit should be carefully read and obeyed. Bodily injury can result when these instructions are not followed. The information is for your safety and it is important.

These labels will act as a constant visual reminder to you, and others who may use the equipment, to follow the safety instructions necessary for safe, effective operation.

If any of these labels are lost or damaged, replace them at once. See you local dealer for replacements.

PRE-START GUIDELINES

• Install any covers or guards which may have been removed for shipping purposes.
• Before starting equipment, walk around equipment, making a visual inspection that all safety devices are properly installed and secured.
• Check that all hardware, fasteners, hydraulic fittings, etc. are in good condition and properly fastened. Replace any fatigued or damaged items with proper replacements.
• Personnel who are not required to be in the work area should be kept away. Never start the equipment unless you are absolutely certain that everyone in the area is clear of the machine and aware it is being started.
• Follow the manufacturer’s recommended start-up procedure.

OPERATION GUIDELINES

Read, understand and follow all instructions in the manual and on the unit before starting.

NOTE: All reference to left, right, front or rear are given from the operator position and facing forward.

• To avoid serious injury or death, do not modify equipment. Any modifications made to equipment can be dangerous and can void equipment warranty.
• Never defeat a safety device to make a task easier.
• Always wear proper apparel when operating equipment; safety glasses, face shield or goggles, ear protection, and dust mask. Tie hair back. Never wear loose clothing or jewelry that could get caught in moving parts.
• Never operate equipment with covers or guards removed. Rotating parts can cause severe injury. Keep hands, feet, hair, jewelry and clothing away from all moving parts.
• Only allow responsible adults who are familiar with the instructions, to operate the unit (local regulations can restrict operator age).
• Clear the area of objects such as rocks, toys, wire, etc., which could be picked up and thrown.
• Be aware of surroundings. Be sure the area is clear of other people, bystanders or pets. Stop unit if anyone enters the area.
SAFETY

• Always look down and behind before and while traveling in reverse.
• Be aware of discharge direction and do not point discharge at anyone. Do not point the discharge at glass enclosures, automobiles, or windows.
• Always stand clear of the discharge area when operating this unit.
• Disengage all clutches and PTOs before starting engine.
• Never leave a running machine unattended. Always disengage the attachment and traction controls, lower the attachment, set the park brake, stop the engine and remove the ignition key before leaving the machine.
• Operate only in daylight or good artificial light.
• Never carry passengers.
• Do not operate the unit while under the influence of drugs, alcohol or other medication.
• Watch for traffic when operating near or crossing roadways.
• Use extra care when loading or unloading the unit into a trailer or truck.
• Keep in mind the operator is responsible for accidents occurring to other people or property.
• Data indicates that operators, age 60 years and above, are involved in a large percentage of power equipment-related injuries. These operators should evaluate their ability to operate the unit safely enough to protect themselves and others from injury.
• All operators should seek and obtain professional and practical instruction.
• Protect eyes, face and head from objects that may be thrown from unit. Wear appropriate hearing protection.
• Always wear substantial footwear and appropriate clothing. Wear footwear that improves traction on slippery slopes. DO NOT wear long scarves or loose clothing that could become entangled in moving parts.
• Abnormal Vibrations are a warning of trouble. Striking a foreign object can damage unit. Stop unit and engine. Wait for all moving parts to stop. Inspect unit and make any necessary repairs before restart.
• Never place your hands or any part of your body or clothing inside or near any moving part while unit is running.
• Stop engine before: refueling, cleaning, making adjustments or removing the attachment assembly.
• Follow the drive unit manufacturer’s recommendations for wheel weights or counter weights.
• Make any adjustments before operating unit.
• Do not touch parts which may be hot from operation. Allow such parts to cool before attempting to service the unit.
• Before using, always visually check that hardware is present, intact and secure. Replace worn or damaged parts.
• Never operate the machine with damaged guards, or without safety protective devices in place.
• Follow the manufacturer’s recommendations for towing weight restrictions and procedures.
• Original purchaser of this unit was instructed by the seller on safe and proper operation. If unit is to be used by someone other than original purchaser; loaned, rented or sold, ALWAYS provide this manual and any needed safety training before operation.
• The Operator must understand the functions and parameters of all controls and how to operate, as well as how to STOP in an Emergency.

MAINTENANCE GUIDELINES

• Maintain or replace safety and instruction decals/labels as necessary.
• Never run a unit in an enclosed area.
• Keep nuts and bolts tight and keep equipment in good condition.
• Never tamper with safety devices. Check their proper operation regularly and make necessary repairs if they are not functioning properly.
• Keep unit free of debris and build-up. Clean up any oil spillage.
• Never make adjustments or repairs with the engine running unless specified otherwise in the engine manufacture’s manual.
• Components are subject to wear, damage, and deterioration. Frequently check components and replace with the manufacturer’s recommended parts, when necessary.
• Check control operation frequently. Adjust and service as necessary.
• Never attempt to make your own repairs on this unit unless you have been properly trained. Improper service procedures can result in hazardous operation, equipment damage and voiding the manufacturer’s warranty.
• Stop engine on tractor and set parking brake before performing any adjustments on the machinery.
• Do not disassemble a pressurized system unless properly trained and equipped with adequate tooling.
• Escaping hydraulic fluid under pressure can have sufficient force to penetrate the skin, causing serious injury. Before operation, be sure that all hydraulic connections are tight and hoses are not damaged.
• Relieve pressure in system before making adjustments.
• Oils and fluids can be very hot under pressure. Use caution and allow the system to cool before beginning maintenance work.
• Never operate or pressurize one of these systems with worn or damaged components. Replace hoses, fittings, valves or other components which appear defective.
• Never adjust pressurized systems beyond recommended levels to achieve higher operating pressures.
• NEVER search for hydraulic leaks with only your hands. Use cardboard or a piece of wood.
• For engine equipped models, follow specific engine manufacturer’s recommended service intervals for dirty/dusty environments.
INSTALLATION

The broom is shipped partially disassembled to conserve shipping space and to package securely to reduce the possibility of damage in transit. Remove all components from the shipping crate and place in a secure location.

NOTE: The broom mounting components shown throughout this instruction are representative only. Actual mounting components will be specific to the prime mover type and brand.

Loader
See Figure 2.

1. Remove the bucket or other attachment from the loader arms by removing pins or disconnecting the quick-attach.
2. Using the bucket pins, attach the mounting frame on the loaders arms or use quick-attach to secure the mounting frame to the loader.

NOTE: It may be easier to remove the swing cylinder before connecting the mounting frame and hitch frame.

3. Position the loader with the mounting frame behind the broom and hitch frame assembly and pin the two together.
4. Lower the loader arms until the desired height of approximately 15 1/4" from the bottom of the hitch frame to the ground is reached.
5. Using the loader dump cylinders, rotate the mounting frame back until the front of it is vertical. Recheck the height of the hitch frame after making this adjustment.
6. Disable the dump cylinders by locking the control lever or disconnecting the hoses. This will prevent the frame from being tipped out of adjustment.

NOTE: Do not operate loader arms in float mode.
7. Adjust the broom pattern. Refer to the Setup and Adjustments procedure within this manual.

Truck
See Figure 2 and Figure 3.

1. Attach the broom using the quick-attach or pin-attach provided and then check to see that the hitch frame is level (parallel) with the ground. The bottom of hitch frame should be approximately 15 1/4" from the ground.
2. Attach the lift chain to the plow lifting arm.
3. Adjust the broom pattern. Refer to the Setup and Adjustments procedure within this manual.
Install the tractor on the broom pivot frame. The tractor must be equipped with stabilizer bars to hold the pivot frame in a rigid lateral position to prevent broom twist and/or contact with tractor tires.

2. Position chain anchor brackets on top point of tractor 3-point hitch.
3. Secure pivot frame to tractor hitch points using appropriate hitch pins for hitch Category (I, II, III). Secure hitch pins as necessary with clip pins. See Figure 4.
4. Install and lock support chains into anchor brackets in a position that provides for correct broom pattern. Refer to the Pattern Adjustment procedure within the Setup and Adjustments section in this manual.

Figure 4
CONTROLS
Operation of the TKH Hydraulic Power Broom is accomplished with the prime mover’s electric/hydraulic controls. Refer to the prime mover’s Operation/Owner’s Manual.

FEATURES
Refer to the Setup and Adjustments instruction, Specifications and Parts Lists within this manual for information on the TKH Hydraulic Power Broom components and functions.
SETUP AND ADJUSTMENTS

SETUP
Proper setup and leveling of your power broom will increase the life of the brush and produces more efficient movement of material. Visually inspect the adjustments on the broom before each operating session and measure the adjustments once every 10 hours.

The following procedures must be followed in the prescribed order in order to be effective.

Once the broom has been properly adjusted, a short operation period is recommended for break-in; approximately 15 minutes. After this break-in period repeat the leveling procedure to ensure that it is correct. Mounting instructions can be found in the prime mover instruction manual.

PATTERN ADJUSTMENT
See Figure 5.

To set the brush pattern (swept area).

1. With the unit on a flat level surface, loosen the jam nut on the brush frame end of the actuator rod.
2. Turn the hex on the body of the actuator to adjust its length to raise/lower broom. Lengthening the actuator will lower the broom, creating more contact.
3. Tighten the jam nut on the brush frame end of the actuator rod.
4. Confirm adjustment by running the broom for about 30 seconds in the down position while stationary. Stop the broom and move the unit away. The ‘cleaned’ area (contact patch) should be 2-4” wide from front to rear for the entire length of the broom (Figure 6).

When mounted to a tractor 3-point hitch, the brush pattern (swept area) is determined by how far the 3-point hitch is allowed to lower the broom assembly. The chains act as a stop (down limit).

The chain anchor brackets are slotted to allow adjustment to the length of support chain. The chain length should be increased as the broom wears, allowing the broom to be dropped lower, maintaining proper brush pattern.

Once the broom has been properly adjusted, a short operation period is recommended for break-in; approximately 15 minutes. After this break-in period, repeat the leveling procedure to ensure that it is correct.
OPERATION

PRE-STARTUP CHECKS

IMPORTANT! You must read, understand and comply with all the safety and operating instructions in this manual before attempting to set-up and operate your power broom. Failure to comply with the safety and operating instructions can result in loss of machine control, serious personal injury to you and/or bystanders, and risk of equipment and property damage.

1. Visually inspect equipment and hardware to ensure that all parts are secure and all hardware is tightened and secure.
2. Check for oil leaks and loose hose connections.
3. Inspect the broom adjustments to ensure that the broom is level and that there is a proper brush pattern. Refer to the Setup and Adjustment section of this manual.
4. Inspect the bristle length to determine if replacement segments are needed.

TRAVEL PROCEDURE

Follow these instructions for extended travel (i.e. to and from the sweeping site):

• Set broom rotation control to the OFF position.
• Use the lift control to bring the broom to the fully raised position.
• Raise the broom support stands to the highest position and secure in place.

OPERATION

IMPORTANT! The support stands should never be used for anything other than as stationary storage stands to hold the broom up while it is being stored.

• Ensure the support stands are raised to the highest position and secured in place.
• Sweep at a speed that is appropriate for the conditions and location.
• For heavy material such as gravel or stones, drive more slowly with a higher broom speed. For lighter material, drive faster with a lower broom speed.
• It may be necessary to increase broom contact pattern under some conditions. If the surface being swept is uneven and causes the broom to leave upswept patches, increase the pattern size to compensate.
• If the material being swept is dried-on or difficult to remove, such as mud or ice, it may be necessary to drive extremely slow to allow the broom to “scrub” the surface. If the material being swept is dried-on or difficult to remove such as mud or ice, it may be necessary to drive extremely slow to allow the broom to “scrub” the surface.
MAINTENANCE

MAINTENANCE SCHEDULE

• Check adjustments – every 10 hours
• Grease bearings – after initial 10 hours, then every 200 - 300 hours thereafter.
• Grease pivot points – every 50 hours

NOTE: Grease points are noted with an applicable decal.

NOTE: Maintenance pertaining to oil and oil filter only refers to an independent hydraulic system provided by M-B Co.

• Check and refill oil level – every 50 hours
• Replace oil filter – every 250 hours
• Replace hydraulic oil – annually
• Replace brush filler – as needed

LUBRICATION

• Grease bearings and pivot points per the MAINTENANCE SCHEDULE using Chevron Ultra Duty II, Grade 2; or equivalent high-temp grease.
• There are minimum of (13) grease points on the unit; (4) on the brush frame horizontal tubes, (2) on the brush frame caster wheel tubes, (2) on the caster wheel hubs, (3) on the pivot frame, and (2) on the brush core support bearings.
• Use an ISO 32 or greater hydraulic fluid, dependant upon operating temperatures, for M-B supplied independent hydraulic systems.
  If the oil is supplied by the prime mover, use the prime mover manufacturer’s recommended fluid.

FILLER REPLACEMENT

Core Removal

1. Lower broom until brush contacts the ground.
2. Remove (4) 1/2-13 lock nuts from brush frame. Retain mounting hardware. See Figure 8.

CAUTION! Support the broom hood when removing the hydraulic motors. The broom is driven and supported by the hex hub attached to the motor. When they motors are pulled out the hood or broom may move.

3. Slide motor out of mating hub. Let motor hang on hoses. Retain mounting hardware. See Figure 8.
4. Raise the broom hood.
5. Slide core out the front of broom.
MAINTENANCE

Brush Removal
1. Remove (4) capscrews, lock washers and end disc (wafer retainer plate) from one end of core. Retain end disc and mounting hardware. See Figure 9.
2. Slide spent brush wafers and spacers off core and discard.

Brush Installation
NOTE: Always start and finish with a poly wafer.
1. Stand core in upright position and begin filling by sliding a poly brush wafer and then a spacer down the full length of the core.
2. Note the location of the drive pin on the inside ring of each brush wafer. Position each wafer so its drive pin is positioned between the stop flanges. Rotate each subsequent wafer before installing so the position of its pin is staggered on the core by one stop flange. See Figure 10.
3. Position the overlap of the first spacer between the stop flanges, rotated one flange ahead of the drive pin location of the last installed brush wafer. All following spacers must follow the same staggered placement pattern.
4. Continue stacking the core in a wafer-spacer, wafer-spacer configuration until it is full, ending with a poly brush wafer.
NOTE: The last wafer (poly) should actually extend beyond the end of the core (minimum 1/2”). The end disc compresses the spacers onto the core when tightened.
5. Install end disc on core with original hardware. See Figure 9.
6. Install splined hub on core with original hardware. See Figure 9.
7. Install end bearing on hub.

Core Installation
1. Position filled core in front of the broom head. Lift the broom high enough so that core clears the hood and the brush can be rolled/pushed back into its original position. Once in place, lower broom head down to line up the center of the core hex opening with the frame opening for the hydraulic motor.
2. Slide motor hex hub into mating opening in the broom core.
3. Install motor on each side of the brush frame using original hardware. See Figure 8.
4. Before placing machine back into service, adjust and test for proper amount of brush pattern. Excessive and/or misaligned pattern can cause brush failure or premature wear. Refer to the Setup and Adjustments section of the manual for pattern adjustment.

IMPORTANT! Proper wafer and spacer position must be followed to ensure proper balance on the core.

NOTE: The circular spacers have unconnected, overlapped ends.

NOTE: Brush surface contact during initial operation will set all wafer drive pins up against the core stop flanges. See Figure 11.
STORAGE

- Always store the broom in a supported position, on its included stands, with the brush off the ground. If the bristles are stored in a deformed position for extended periods of time the broom will become severely out of balance.
- Store the broom in a location out of the sun and weather to prevent premature failure of plastic bristles. Bristles can become brittle when subjected to sunlight or repeated temperature changes.
- Disconnect all electrical connections between the broom and prime mover (loader/tractor) for extended storage to prevent battery drain.
- Properly clean the unit before storage and remove dirt, debris, salt, etc. to extend paint life.
- If the unit is power-washed, all lubrication points should be greased before storage.
## TROUBLESHOOTING

<table>
<thead>
<tr>
<th>Trouble</th>
<th>Possible Cause</th>
<th>Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Broom does not rotate.</strong></td>
<td>1. No hydraulic pressure/flow. 2. Hoses disconnected. 3. Hoses bent or kinked. 4. Pressure relieving too low. 5. Electric valve not functioning.</td>
<td>1. Check prime mover hydraulic pump operation. 2. Connect hoses and fittings. 3. Remove sharp bends and kinks. 4. Adjust relief valve. 5. Check electrical connections.</td>
</tr>
<tr>
<td><strong>Broom rotates in wrong direction.</strong></td>
<td>1. Hoses installed incorrectly.</td>
<td>1. Switch hydraulic hose connections</td>
</tr>
<tr>
<td><strong>Bristles wearing unevenly.</strong></td>
<td>1. Pivot frame mounting to prime mover hitch not level. 2. Pattern adjustment incorrectly set. 3. Tires on prime mover at different pressures or of different sizes.</td>
<td>1. Adjust hitch frame/mounting frame to prime mover. Refer to the Installation section of this manual. 2. Adjust with pivot frame to brush frame actuator link. Refer to the Setup and Adjustments section of this manual. 3. Check tire pressure, sizes and rating. Adjust and/or correct as necessary.</td>
</tr>
<tr>
<td><strong>Brushes wearing very quickly.</strong></td>
<td>1. Brush pattern too wide.</td>
<td>1. Adjust brush pattern to be 2-4” wide. Refer to the Setup and Adjustments section of this manual.</td>
</tr>
<tr>
<td><strong>Broom bounces during sweeping.</strong></td>
<td>1. Travel speed too fast and/or brush speed too slow. 2. Unbalanced broom core assembly.</td>
<td>1. Adjust to find correct ground and brush speed for surface. 2. Inspect brush wafer and spacer placement on core. Refer to Maintenance section.</td>
</tr>
<tr>
<td><strong>Broom sweeping poorly.</strong></td>
<td>1. Material is ‘caked-on’ or frozen. 2. Uneven sweeping surface. 3. Material is too heavy. 4. Broom rotating too slowly. 5. Prime mover moving too fast. 6. Pattern adjustment incorrectly set.</td>
<td>1. Slow down and ‘scrub’ surface. 2. Increase pattern to compensate. 3. Slow down prime mover speed. 4. Increase engine speed. 5. Slow down prime mover speed. 6. Adjust with pivot frame to brush frame actuator link. Refer to the Setup and Adjustments section of this manual.</td>
</tr>
<tr>
<td><strong>Broom does not lift or angle.</strong></td>
<td>1. No/Low hydraulic pressure/flow. 2. Electric valve not functioning. 3. System backpressure.</td>
<td>1. Check prime mover operation. Check hydraulic oil level. Refer to Maintenance section of this manual for hydraulic system requirements. 2. Check electrical connections. 3. Check prime mover instructional manual.</td>
</tr>
<tr>
<td><strong>Hydraulic pump making noise.</strong></td>
<td>1. Pump intake blocked. 2. Shaft seal leaking.</td>
<td>1. Check inlet lines for obstructions. 2. Check and repair as necessary.</td>
</tr>

</table>
Warranty/Product Registration

A Warranty Registration Form must be submitted online to make warranty effective.

Warranty Start Date:
All claims must be submitted using the proper form and emailed to mbattachments@m-bco.com. To be eligible for warranty payment the product must be registered with M-B Companies via www.m-bco.com/attachments/warranty

M-B Companies, Inc. reserves the right to decline any claim that does not meet above requirements. Pre-Approval Required Prior To ANY Work Being Performed.

LIMITED WARRANTY

Limited Warranty: Subject to the limitations set forth herein, M-B Companies, Inc. ("M-B") warrants its products to be free from defects in material and workmanship for a period of twelve (12) months from the date of delivery of the product to its original owner, except that the warranty is twelve (12) months solely for the following products: Truck Mounted Pavement Marking Equipment, Airport Snow Removal Products, Attachment Products, Brushes, MSV Multi-Service Vehicles. Parts shall have a ninety (90) day warranty. This warranty is not transferable without the written consent of M-B.

Notice: M-B’s obligations under this Limited Warranty are conditioned on M-B receiving, within the warranty period, written notice from Buyer specifying the nature of any alleged defect and requesting corrective action by Seller.

Remedies: M-B, at its option, will repair or replace, or provide a credit to Buyer for, defective warranted items. If requested by M-B, products or parts for which a warranty claim is made shall be returned, transportation prepaid, to M-B’s factory. Buyer shall not return any product for repair, replacement or credit without M-B’s advance written consent.

Other Manufacturer’s Warranty: On products furnished by M-B, but manufactured by any other manufacturer, the warranty of said manufacturer, if any, will be assigned to Buyer, if the said warranty is assignable. However, M-B does not represent or guarantee that such manufacturer will comply with any of the terms of the warranty of such manufacturer.

Exclusions: Any improper use, operation beyond capacity, or substitution of parts not approved by M-B, or alteration or repair by others in such a manner as in M-B’s judgment materially and/or adversely affects the product shall void this warranty. This warranty does not apply to defects caused by damage or unreasonable use while in the possession of the owner, including but not limited to: failure to provide reasonable and necessary maintenance, normal wear, routine tune ups or adjustments, improper handling or accidents, operation at speed or load conditions contrary to published specifications, improper or insufficient lubrication, or improper storage.

Seller manufactures power brooms that mount to many makes and models of equipment. Seller attempts to ensure that the mounting frames fit correctly. However, the large number of tractor models, types and options currently available, compounded by frequent manufacturer design changes, may prevent Seller from supplying a frame that fits every unit correctly. Therefore, unless Buyer supplies drawing which detail the attachment points on the specific unit to which the broom will be mounted, Seller will not be responsible for the fit of the mounting frame.

The batteries, tires, rubber material, brushes and material normally consumed in operation, and major components such as engines, air compressors, and hydraulic pumps and motors are excluded from this warranty but may be covered to the extent of any warranty received by M-B from its supplier if permitted by the terms of such warranty.

Limitations of liability: M-B shall not be liable for any incidental, consequential, punitive or special damages of any kind, including, but not limited to, consequential labor costs or transportation charges in connection with the repair or replacement of defective parts, or lost time profits or expense which may have accrued because of said defect.

M-B disclaims all other warranties, whether express or implied, including but not limited to any implied warranty of merchantability or fitness for a particular purpose. This warranty is exclusive remedy of buyer. This warranty cannot be extended, broadened or changed in any respect except in writing by an authorized officer of M-B.

Notwithstanding anything in this warranty is to the contrary, in no event shall M-B’s total liability hereunder exceed the purchased price of the particular product.
