OPERATOR’S MANUAL

You must read, understand and comply with all the safety and operating instructions in this manual before attempting to set-up and operate the 53H Broom.

Failure to comply with the safety and operating instructions can result in loss of machine control, serious personal injury to you and/or bystanders, and risk of equipment and property damage.

IDENTIFICATION NUMBERS

When contacting your authorized dealer for information, replacement parts or service, you MUST have the model and serial number of your unit.

Record the serial number in the space provided. The serial number plate/decal can be found in the location shown in Figure 1.

A Federal Motor Vehicle Safety Standard (FMVSS) tag is mounted on the forward right side of the trailer frame. See Figure 2.
This Page Intentionally Blank
SAFETY ALERTS

Signal words and alert symbols notify of important safety precautions.

**DANGER!** Indicates a hazardous situation which, if not avoided, will result in serious injury or death.

**WARNING!** Indicates a hazardous situation which, if not avoided, could result in serious injury or death.

**CAUTION!** Indicates a hazardous situation or unsafe practice which, if not avoided, could result in minor or moderate injury or property damage.

SAFETY DECALS

Although reading this manual and the safety instructions it contains will provide you with the necessary basic knowledge to operate this equipment safely and effectively, we have placed several safety labels on the unit to remind you of this important information while you are operating your unit.

All DANGER, WARNING, CAUTION, and instructional messages on your unit should be carefully read and obeyed. Bodily injury can result when these instructions are not followed. The information is for your safety and it is important.

These labels will act as a constant visual reminder to you, and others who may use the equipment, to follow the safety instructions necessary for safe, effective operation.

If any of these labels are lost or damaged, replace them at once. See your local dealer for replacements.

OPERATION GUIDELINES

Read, understand and follow all instructions in the manual and on the unit before starting.

• Only allow responsible adults who are familiar with the instructions, to operate the unit (local regulations can restrict operator age).
• Clear the area of objects such as rocks, toys, wire, etc., which could be picked up and thrown.
• Be sure the area is clear of other people, bystanders or pets. Stop unit if anyone enters the area.
• Always look down and behind before and while traveling in reverse.
• Be aware of discharge direction and do not point discharge at anyone. Do not point the discharge at glass enclosures, automobiles, or windows.
• Always stand clear of the discharge area when operating this unit.
• Disengage all clutches and PTO’s before starting engine.
• Never leave a running machine unattended. Always disengage the attachment and traction controls, lower the attachment, set the park brake, stop the engine and remove the ignition key before leaving the machine.
• Operate only in daylight or good artificial light.
• Never carry passengers.
• Do not operate the unit while under the influence of drugs, alcohol or other medication.
• Watch for traffic when operating near or crossing roadways.
• Use extra care when loading or unloading the unit into a trailer or truck.
• Keep in mind the operator is responsible for accidents occurring to other people or property.
• Data indicates that operators, age 60 years and above, are involved in a large percentage of power equipment-related injuries. These operators should evaluate their ability to operate the unit safely enough to protect themselves and others from injury.
• All operators should seek and obtain professional and practical instruction.
• Protect eyes, face and head from objects that may be thrown from unit. Wear appropriate hearing protection.
SAFETY

- Always wear substantial footwear and appropriate clothing. Wear footwear that improves traction on slippery slopes. DO NOT wear long scarves or loose clothing that could become entangled in moving parts.
- Never place your hands or any part of your body or clothing inside or near any moving part while unit is running.
- Stop engine before: refueling, cleaning, making adjustments or removing the attachment assembly.
- Follow the drive unit manufacturer’s recommendations for wheel weights or counter weights.
- Adjust level and pattern before operating.
- Do not touch parts which may be hot from operation. Allow such parts to cool before attempting to service the unit.
- Before using, always visually check that hardware is present, intact and secure. Replace worn or damaged parts.
- Never operate the machine with damaged guards, or without safety protective devices in place.
- Follow the manufacturer’s recommendations for towing weight restrictions and procedures.

MAINTENANCE GUIDELINES

- Maintain or replace safety and instruction decals/labels as necessary.
- Never run a unit in an enclosed area.
- Keep nuts and bolts tight and keep equipment in good condition.
- Never tamper with safety devices. Check their proper operation regularly and make necessary repairs if they are not functioning properly.
- Keep unit free of debris and build-up. Clean up any oil spillage.
- Stop and inspect equipment if you strike an object. Repair, if necessary, before restarting.
- Never make adjustments or repairs with the engine running unless specified otherwise in the engine manufacturer’s manual.
- Components are subject to wear, damage, and deterioration. Frequently check components and replace with the manufacturer’s recommended parts, when necessary.
- Check control operation frequently. Adjust and service as necessary.
- Use only factory authorized parts when making repairs.
- Always comply with factory specifications on all settings and adjustments.
- Only authorized service locations should be utilized for major service and repair requirements.
- Never attempt to make your own repairs on this unit unless you have been properly trained. Improper service procedures can result in hazardous operation, equipment damage and voiding the manufacturer’s warranty.
- Stop engine on tractor and set parking brake before performing any adjustments on the machinery.
- Escaping hydraulic fluid under pressure can have sufficient force to penetrate the skin, causing serious injury. Before operation, be sure that all hydraulic connections are tight and hoses are not damaged. Relieve pressure in system before making adjustments.
- NEVER search for hydraulic leaks with only your hands. Use cardboard or a piece of wood.
- For engine equipped models, follow specific engine manufacturers recommended service intervals for dirty/dusty environments.
CONTROLS AND FEATURES

See Figure 1.
1. Hitch Coupler (Ball or Pintle type)
2. Tow Safety Chains
3. Operator Controls *
4. Storage Support Jack (or optional 3rd Wheel)
5. Main Hydraulic Connection Hoses
6. Electrical (Lights) Connector (Optional)
7. Broom Head Assembly
8. Lifting Lug (2)
9. Hydraulic Control Valve (Optional)
10. Strobe Beacon (Optional)
11. Sight Indicators (Optional)
   (Custom style shown)

* Refer to the OPERATION section for more information.

See Figure 2.
1. Safety Support Chains
2. Lift Cylinder
3. Swing Cylinder

Figure 1

Figure 2
This Page Intentionally Blank
CONTROLS

See Figure 1 when equipped with the electrical control box option. See Figure 2 when equipped with hydraulic control levers.

1. STROBE ON/OFF
   Used to control the strobe beacon and rear flashers.

2. BROOM ▼ ▶ (Left/Right)
   Momentary switch, with Neutral center position, incrementally angles the broom head left (▼) or right (▶).

3. BROOM ▲▼ (Raise/Lower)
   Momentary switch, with Neutral center position, incrementally moves the broom head up (▲) or down (▼). Hold switch in the ▼ position for a minimum of 3 seconds to lock in place, ensuring broom is held fully lowered.

4. Broom Rotation ON/OFF
   Used to control (On/Off) broom rotation.

5. Broom Swing (LEFT/RIGHT)
   Momentary valve, with Neutral center position, incrementally angles the broom head left or right.

6. Broom UP/DOWN
   Momentary valve, with Neutral center position, incrementally raises/lowers broom head. Hold lever in the DOWN position for a minimum of 3 seconds to lock in place, ensuring broom is held fully lowered. Once broom is raised (UP) fully, close supply valve to lock broom in raised position.

7. Broom UP/DOWN Lock Valve
   Close valve (handle perpendicular to hydraulic line) once broom is raised (UP) fully to lock broom in position for transport.

Figure 1.
OPERATION

PRE-START CHECKS

IMPORTANT! You must read, understand and comply with all the safety and operating instructions in this manual before attempting to set-up and operate your power broom. Failure to comply with the safety and operating instructions can result in loss of machine control, serious personal injury to you and/or bystanders, and risk of equipment and property damage.

1. Visually inspect equipment and hardware to ensure that all parts are secure and all hardware is tightened and secure.
2. Check for oil leaks and loose hose connections.
3. Inspect the broom adjustments to ensure that the broom is level and that there is proper brush pattern. Refer to the SETUP AND ADJUSTMENT section.
4. Inspect the bristle length to determine if replacement segments are needed.

OPERATION

1. Ensure that the broom head safety support chains are removed.
2. Lower the broom to the sweeping position.
3. Check the broom for level and adjust if required according to the Leveling procedure within the SETUP AND ADJUSTMENTS section.
4. Check the pattern and adjust if required according to the Pattern Adjustment procedure within the SETUP AND ADJUSTMENTS section.
5. Turn on the beacon light (STROBE ON/OFF) before towing.

IMPORTANT! When starting or stopping broom rotation, always set prime mover control to SLOW.

• Maximum sweeping speed of 20 mph.

• For heavy material such as gravel or stones, drive more slowly with a higher broom speed. For lighter material, drive faster with a lower broom speed.

• If the material being swept is dried-on or difficult to remove, such as mud or ice, it may be necessary to drive extremely slow to allow the broom to “scrub” the surface.

TRAVEL PROCEDURE

Follow these instructions for extended travel (i.e. to and from the sweeping site):

1. Stop broom rotation, either by stopping hydraulic flow from tow vehicle or with the broom’s rotation control, if so equipped.
2. Set broom to straight ahead position, either manually or using broom swing control, if so equipped.
3. Use the lift control to raise the broom to the fully UP position.
4. Install the safety support chains and lower the broom so that the weight of the broom head is resting on the chains. Refer to CONTROLS AND FEATURES for location of chains.
5. Close broom lock valve (handle perpendicular to hydraulic line) to lock hydraulic fluid, if so equipped.
6. Ensure that the broom is securely attached to the tow vehicle before moving.

IMPORTANT! Maximum tow speed with trailer brakes is 60 mph.

For two wheel-design without brakes, recommended maximum tow speed is 35 mph.

For 3rd wheel-design without brakes, recommended maximum tow speed is 15 mph.
SETUP AND ADJUSTMENTS

SETUP
Proper setup and leveling of your power broom will increase the life of the brush and produces more efficient movement of material. Visually inspect the adjustments on the broom before each operating session and measure the adjustments once every 10 hours.

The following procedures must be followed in the prescribed sequence in order to be effective.

HITCH HEIGHT ADJUSTMENT
See Figure 1.
When not equipped with the 3rd (front) wheel option, use coupler mounting hardware to raise or lower hitch until bottom of support tube is 40-1/2" from ground.

LEVELING
See Figures 1 and 2.
1. With the broom mounted (hitched) to the prime mover, park the unit on a flat level surface; preferably concrete or asphalt.
2. Swing the broom so that it is centered perpendicular (square) to support tube. Take measurements from common reference points between brush frame and main frame to verify.
3. Tighten the lift cylinder pattern adjustment nuts all the way down.
4. Adjust the broom head so it is level side-to-side by adjusting the position of the brush frame to the swing frame. Adjustment is made with the (2) 3/4-10 x 2" carriage bolts, flat washers and lock nuts. Place a level on the broom hood to verify it is level.
5. Swing broom fully side-to-side twice and return to centered position. Recheck broom head for level. If still level, continue to Pattern Adjustment. If not, perform the leveling process again.

PATTERN ADJUSTMENT
1. After the broom has been leveled, the last adjustment is to set the brush pattern (swept area).
2. With the unit on a flat level surface, adjust the nuts on the end of the lift cylinder so that the broom contact patch is approximately 3" wide from front to rear. Loosening the nuts will lower the broom, creating more contact. See Figure 2.
3. Once this adjustment is set, it can be confirmed by running the unit for about 30 seconds in the down position while stationary. Stop the broom and move the unit away. The ‘cleaned’ (contact patch) should be 2”-4” wide for the entire length of the broom. See Figure 3.
The level of the broom may create too heavy a brush pattern on either the left or right side (See Figure 4). In order to balance the pattern, the (Left-Right) leveling bolts attaching the swing frame to the brush frame must be loosened and the brush frame position adjusted to compensate for the lean. See Figure 2.

Once the broom has been properly adjusted, a short operation period is recommended for break-in; approximately 15 minutes. After this break-in period, repeat the leveling procedure to ensure that it is correct.
MAINTENANCE

MAINTENANCE SCHEDULE
• Check adjustments – every 10 hours
• Grease bearings – after initial 10 hours, then every 200 - 300 hours thereafter.
• Grease pivot points – every 50 hours

NOTE: Grease points are noted with an applicable decal.

LUBRICATION
• Grease bearings and pivot points per the MAINTENANCE SCHEDULE using Chevron Ultra Duty II, Grade 2; or equivalent high-temp grease.
• There are minimum of (6) grease points on the unit; (3) at the brush frame horizontal (lift) tubes, (1) at the swing pivot pin and (2) on the brush end support bearings.

FILLER REPLACEMENT
Core Removal (External Mount Motor)
1. Lower broom with lift cylinder until brush contacts the ground.
2. Remove (2) 1/2-13 x 1-1/2" capscrews, flat washers, lock nuts and motor guard from brush frame. Retain guard and mounting hardware. See Figure 1.
3. Remove (2) 1/2-13 x 1-1/2" capscrews, flat washers, lock nuts and motor mount plate from brush frame. Slide motor out of mating splined hub. Let motor hang on hoses. Retain mounting hardware. See Figure 1.
4. Remove (2) 1/2-13 x 2" bolts, flat washers and lock nuts attaching support bearing to bottom of brush frame at each end of broom. See Figure 2.
5. Slide brush assembly out the front of broom.

Core Removal (Hidden Mount Motor)
1. Lower broom with lift cylinder until brush contacts the ground.
2. Remove (3) 1/2-13 x 1-1/2" horizontal capscrews, (2) 1/2-13 x 1-3/4" vertical capscrews, flat washers and lock nuts attaching each motor mount plate to brush frame. Retain hub and mounting hardware. See Figure 3.
3. Raise broom with lift cylinder until brush frame is clear of motor mount plates.

NOTE: Core support bearings are mounted on inside of motor mount plates.
4. Slide each motor, with attached mount plate, out of mating splined hub. (Figure 4) If necessary, rotate motor and mount plate assembly to clear brush frame. (Figure 3) Let motor and plate assemblies hang on hoses.
5. Slide brush assembly out the front of broom.

Brush Removal (External Mount Motor)
See Figure 2.
1. Remove support bearing from hub on one end of core.
2. Remove (3) 1/2-13 x 1" capscrews, lock washers and splined hub from one end of core. Retain hub and mounting hardware.
3. Remove (4) 5/16-18 x 3/4" capscrews, lock washers and end disc (wafer retainer plate) from one end of core. Retain end disc and mounting hardware.
4. Slide spent brush wafers and spacers off core and discard.

Brush Removal (Hidden Mount Motor)
See Figure 2.
MAINTENANCE

Brush Removal (Hidden Mount Motor)
See Figure 4.

1. Remove (3) 5/16-18 x 3/4" cap screws, lock washers and end disc (wafer retainer plate) from extension on one end of core. Retain end disc and mounting hardware.
2. Slide spent brush wafers and spacers off core and discard.

Brush Installation
NOTE: Wafers and spacers install in the same manner over the core extensions (Figure 4) used with the hidden mount motor option.

1. Stand core in upright position and begin filling by sliding a poly brush wafer and then a spacer down the full length of the core.
   a. Note the location of the drive pin on the inside ring of each brush wafer. Position each wafer so its drive pin is positioned between the stop flanges. Rotate each subsequent wafer before installing so the position of its pin is staggered on the core by one stop flange. See Figure 5.

IMPORTANT! Proper wafer and spacer position must be followed to ensure proper balance on the core.

NOTE: Brush surface contact during initial operation will set all wafer drive pins up against the core stop flanges. See Figure 6.

b. The circular spacers have unconnected, overlapped ends. Position the overlap of the first spacer between the stop flanges, rotated one flange ahead of the drive pin location of the immediately preceding brush wafer. All subsequent spacers must follow the same staggered placement pattern.

3. Continue stacking the core in a wafer-spacer, wafer-spacer configuration until it is full, ending with a poly brush wafer.

NOTE: Always start and finish with a poly wafer. The last wafer should actually extend beyond the end of the core (Minimum 1/2") so the end disc compresses the spacers onto the core when tightened.

4. Install end disc on core or core extension with original hardware. See Figures 2 or 4.

NOTE: Steps 5 and 6 apply to the External Mount Motor configuration only.

5. Install splined hub on core with original hardware. See Figure 2.
6. Install support bearing on hub. See Figure 2.

Figure 3

Figure 4
Core Installation (External Mount Motor)

1. Position refilled core in front of the broom head. Lift the broom head high enough to place the filled core (brush assembly) back into its original position. Once in place, lower broom head down onto the core support bearings. See Figure 2.

2. Attach core support bearings, at each end of broom, to bottom of brush frame with original hardware. See Figure 2.

NOTE: Apply grease to hub splines before installing hydraulic motors.

3. Slide motor shaft into mating splined hub.

4. Install motor mount plate on brush frame using original hardware. See Figure 1.

5. Install motor guard on brush frame with original hardware. See Figure 1.

6. Before placing machine back into service, adjust and test for proper amount of brush pattern. Excessive and/or misaligned pattern can cause brush failure or premature wear. Refer to the Pattern Adjustment procedure within the Setup and Adjustments section.

Core Installation (Hidden Mount Motor)

1. Position refilled core in front of the broom head. Lift the broom head high enough to place the filled core (brush assembly) back into its original position.

NOTE: Apply grease to hub splines before installing hydraulic motors.

Core support bearings are mounted on inside of motor mount plates.

2. Slide each motor, with attached mount plate, into mating splined hub on core. See Figure 4.

3. Lower broom head until brush frame contacts motor mount plates. If necessary, rotate motor and mount plate assemblies to align with brush frame. See Figure 3.

4. Install (3) 1/2-13 x 1-1/2" horizontal capscrews, (2) 1/2-13 x 1-3/4" vertical capscrews, flat washers and lock nuts to attach each motor mount plate to brush frame. See Figure 3.

5. Before placing machine back into service, adjust and test for proper amount of brush pattern. Excessive and/or misaligned pattern can cause brush failure or premature wear. Refer to the Pattern Adjustment procedure within the Setup and Adjustments section.
This Page Intentionally Blank
STORAGE

- Always store the broom so that it is not in contact with the ground. Support the broom from the safety support chains or storage stands, if so equipped. If the broom is stored in contact with the ground for an extend period of time with the bristles deformed, the broom will become severely out of balance.
- Store the broom in a location out of the sun and weather to prevent premature failure of plastic bristles. Bristles can become brittle when subjected to sunlight or repeated temperature changes.
- Disconnect all electrical connections between the broom and prime mover (loader/tractor) for extended storage to prevent battery drain.
- Properly clean the unit before storage and remove dirt, debris, salt, etc. to extend paint life.
- If the unit is power-washed, all lubrication points should be greased before storage.
# Troubleshooting

<table>
<thead>
<tr>
<th>Troubleshooting</th>
<th>Possible Cause</th>
<th>Remedy</th>
</tr>
</thead>
</table>
| **Broom does not rotate.** | 1. No hydraulic pressure/flow.  
2. Hoses disconnected.  
3. Hoses bent or kinked.  
4. Pressure relieving too low.  
5. Electric/manual valve not functioning or not on. | 1. Check prime mover hydraulic supply operation.  
2. Connect hoses and fittings.  
3. Remove sharp bends and kinks. Replace if damaged.  
4. Adjust relief valve.  
5. Check electrical connections. |
| **Broom rotates in wrong direction.** | 1. Hoses installed incorrectly. | 1. Switch hydraulic hose connections |
| **Bristles wearing unevenly.** | 1. Broom head not level.  
2. Pattern adjustment incorrect.  
3. Tires of different sizes or pressures low. | 1. Adjust using leveling bolts. Refer to the Setup and Adjustments section of this manual.  
2. Adjust on head anchor/lift cylinder. Refer to the Setup and Adjustments section of this manual.  
3. Check tire sizes, rating and pressure. Adjust and/or correct as necessary. |
| **Broom bounces during sweeping.** | 1. Travel speed too fast and/or brush speed too slow.  
2. Brush overloaded. | 1. Adjust to find correct ground and brush speed for surface.  
2. Reduce load on brush. |
| **Broom sweeping poorly.** | 1. Pattern adjustment incorrectly set.  
2. Towing too fast.  
3. Uneven sweeping surface.  
4. Material is too heavy.  
5. Material is ‘caked-on’ or frozen.  
2. Slow down towing vehicle speed.  
3. Increase pattern to compensate.  
4. Slow down towing vehicle speed.  
5. Slow down and ‘scrub’ surface.  
6. Increase prime mover hydraulic power supply and/or broom speed.  
7. Replace brush wafers. |
| **Broom does not lift or angle.** | 1. No/Low hydraulic pressure/flow.  
2. Electric/manual valve not functioning. | 1. Check prime mover hydraulic system oil level and circuit operation.  
2. Check electrical operation and connections. Check solenoids, if so equipped. |
| **Remote Operator Control Box (option) not functioning.** | 1. Control Box not connected.  
2. Prime mover not running.  
2. Start prime mover following manufacturer’s start-up guidelines.  
3. Inspect and/or replace fuse. |

**WARNING**

*Flying Objects Hazard*

*Entanglement Hazard*

**CAUTION**

Read Operator’s Manual before using broom. If operating instructions are missing, contact the M-B Co. for your free replacement.

- Before operating broom make sure all guards and broom are installed properly.
- Wear eye protection when operating broom.
- Do not operate broom near any objects that can be damaged by thrown debris. Do not operate near bystanders nor near broom during operation.
- The polypropylene brush segments can melt or burn. Do not subject to excessive heat or flame.
- Do not allow riders on broom.
- Stop power source, lower broom to the ground, set parking brake, and remove ignition key before servicing or adjusting.
- Do not operate broom on any roof or other elevated surface.

**DANGER**

*To prevent serious injury or death:*

- Do not allow any riders

**WARNING**

*Moving Part Hazard*

To prevent serious injury or death from moving parts:

- Close and secure guards and shields before starting.
- Keep hands, feet, hair and clothing away from moving parts.
- Disconnect and lockout power source before adjusting or servicing.
- Do not stand or climb on machine when operating.

**Grease**

*33H decals*
**WARNING**

1. Brush frame support chains must be connected while sweeper is being transported.
2. Put lift cylinder control in the down position once chains are connected.
   Attaching transport chains before towing unit.

---

**DANGER**

To prevent serious injury or death from pinching:
- Keep all persons and objects clear while any part of this machine is in motion.

---

**WARNING**

**MOVING PART HAZARD**
To prevent serious injury or death from moving parts:
- Close and secure guards and shields before starting.
- Keep hands, feet, hair and clothing away from moving parts.
- Disconnect and lockout power source before adjusting or servicing.
- Do not stand or climb on machine when operating.

</table>
NOTE: IN DECEMBER 2006, THE 500 SERIES INCORPORATED A DESIGN CHANGE. THIS SET OF INSTRUCTIONS WILL AID IN THE DISASSEMBLY AND ASSEMBLY FOR BOTH DESIGNS. MID 2010 A DESIGN CHANGE WAS IMPLEMENTED ON WHEEL MOUNTS TO REMOVE THE EXTERNAL DUST SEAL AND REPLACE IT WITH AN INTERNAL EXCLUDER SEAL. PLEASE REFER TO THE EXPLODED VIEW DRAWING ON PAGE 3 TO DETERMINE WHICH DESIGN IS BEING REPAIRED AND THEN FOLLOW THE APPROPRIATE INSTRUCTIONS FOR THAT DESIGN.

Motor Section Disassembly (Same Instructions For Both Designs)

A) Remove all shaft related components from shaft (27) (i.e. keys, wire rings, nuts). To aid in reassembly of the motor, make a "V" shaped set of lines from the endcover (24) to the housing using either paint or a marker. With shaft facing down, secure motor in vise by clamping on to housing (15).

B) Loosen and remove seven bolts (26) holding motor assembly together. Remove endcover (24) and endcover seal (10). Discard seal. Remove balance plate (22) taking care not to drop the three steel balls (23) located in the three holes in the balance plate (22). Remove rotor assembly (21), manifold (19), drive link spacer (20) (NOTE: Some motors do not use spacer), drive link (18) and thrust bearing (17). Remove body seals (9) from rotor assembly (21) and housing seal (8) from housing (15) and discard seals. (NOTE: Compare old housing seal (8) to the two housing seals included in kit to determine which one to use.) Gently tap shaft (27) upward from housing (15) and remove through rear of housing and lay aside.

Housing/Shaft Disassembly And Assembly (Design That Utilizes A Seal Carrier (11))

C) Remove housing (15) from vise and turn over. Pry dust seal (1) from housing. Push the seal carrier (11), thrust washer (12) and thrust bearing (13) down until they make contact with the roller bearing (14) located in the housing bore.

D) Remove wire ring (2), steel backup shim (3) and high pressure seal (4) from inner bore groove with a small screwdriver. Lift seal carrier (11), thrust washer (12) and thrust bearing (13) from the housing bore. Using a small screwdriver, carefully pry shaft seal (7), backup seal (6), and metal backup shim (5) from seal carrier (11) and discard. Lay seal carrier (11), thrust washer (12) and thrust bearing (13) aside. (NOTE: If a new thrust washer (12) and seal carrier (11) is included in kit, old items may be discarded).

At this point, all parts should be cleaned in an oil-base solvent and dried using compressed air (For safety, observe all OSHA safety guidelines). All new seals should be lightly coated in clean oil prior to installation.

E) Place shaft (27) on a clean flat surface with output end facing up. Place thrust bearing (13) (NOTE: If thrust bearing has integral washer, make sure washer surface faces down.) Then thrust washer (12) on shaft (See Technical Bulletin PI444004 to determine correct thrust washer to use). Lightly coat seal area of shaft with clean oil and place plastic installation sleeve with shaft seal (7) down onto shaft covering all splines, keyways and wire ring grooves. Slide shaft seal (7) down onto shaft (27) making sure that lip on seal faces down (See Figure 1 for correct seal orientation) until it contacts thrust washer (12). Remove plastic installation sleeve. Carefully install the backup seal (6) onto the shaft (27) with the flat side up and the seal lip facing the shaft seal (7). Place the metal backup shim (5) onto the shaft and against the backup seal (6). Place the seal carrier (11) onto the shaft (large end down) and carefully press the seal carrier (11) down onto the seal assembly using an arbor press and sleeve to compress the seal into the carrier.

F) With pilot side facing up, place housing (15) on spacers to raise housing approximately 6 [.25] above work surface (NOTE: Spacers should allow shaft to contact work surface). Place shaft/seal carrier assembly into housing (15). Install high pressure seal (4) into groove in housing. Install metal backup shim (3) against high pressure seal (4) in groove in housing bore by squeezing the shim (3) between thumb and forefinger to bow shim. While maintaining bow in shim, start the shim into the groove and use a small screwdriver to push the shim into groove. Install wire ring (2) into the groove making sure that the ends are butted.

G) While holding shaft into housing, place housing/ shaft assembly in vise with shaft end down. Making sure that end of drive link (18) with crowned splines goes into shaft end, install drive link (18) into shaft and tap lightly to seat the seal carrier against the wire ring (2). Place thrust bearing (17) over drive link (18). If seal carrier (11) is properly seated against wire ring (2), thrust bearing (17) will be flush with rear surface of housing.

Housing/Shaft Disassembly And Assembly (Design That Does NOT Utilize A Seal Carrier (11))

H) Position the housing (15) in vise and use a slide and hammer type bearing puller to remove the rear housing bearing (16), the bearing spacer (32), and the front housing bearing (14). Remove the thrust washer (12) and thrust bearing (13) and set aside. Using a small screwdriver carefully pry the seal shaft (7), backup seal (6), and metal shim (5) from housing bore and discard. Also remove excluder seal (33) if the motor design uses this seal and discard. (See Figure 4 for additional information.)

I) Remove the housing from vise and turn over and pry the dust seal (1) from housing and discard (external dust seal is not used on models that use an internal excluder seal).

At this point, all parts should be cleaned in an oil-base solvent and dried using compressed air (For safety, observe all OSHA safety guidelines). All new seals should be lightly coated in clean oil prior to installation.
J) Place housing (15) in vice with the seven bolt assembly holes facing up. If model uses an excluder seal (33), place in the recess of housing. Place metal shim (5) in the smallest diameter recess in the housing (15) on top of excluder seal if used. Install the backup seal (6) into the housing (15) with the flat side down and the seal lip facing up. Insert shaft seal (7) down into housing (15) making sure that lip on seal faces up (See Figure 2 for correct seal orientation). Install thrust washer (12) into housing and using an arbor press, seat the shaft seal (7) into housing (15), then place the thrust bearing (13) into housing.

K) Place front housing bearing (14) onto housing and press bearing into housing to a depth of 60,1 [2.37] from the rear surface of the housing (15) to the top of the bearing. Insert the bearing spacer (32) into the housing. Place the rear housing bearing (16) onto the rear housing bore and press to a depth of 3,6 [14] from the rear surface of the housing (15) to the top of the bearing (16). Place the shaft (27) down into housing (15) and place thrust bearing (17) on top of shaft (27). If shaft seals are properly seated against the housing (15), thrust bearing (17) will be flush with rear surface of housing.

Motor Section Assembly (Same Instructions For Both Designs)

L) Install housing seal (8) into groove in housing (15). Place manifold (19) onto housing, (15) side with only seven holes facing housing (15). Place body seals (9) in grooves in both sides of rotor (21). Place rotor (21) onto manifold (19) with side of rotor with chamfer in splines facing manifold (19).

M) Install balance plate (22) onto rotor (21) making sure holes for steel balls (23) faces up. Install three steel balls (23) in holes in balance plate (22). Install endcover seal (10) into groove in endcover (24) and place endcover onto balance plate (22). Install seven assembly bolts (26) and pre-torque to 13,6 Nm [10 ft. lbs.] Using the bolt torque sequence shown in Figure 3, final torque all bolts to 67,8 Nm [50 ft. lbs.]

N) Remove motor from vise and place on work surface with shaft (27) facing up. Making sure that lip on seal (1) faces up, place dust seal (1) over shaft (27). Using a sleeve and a hammer, carefully drive dust seal (1) into place.

**EXPLODED VIEW PARTS DESCRIPTION**

1. *† Dust Seal
2. *† Split Wire Ring
3. *† Metal Backup Shim
4. *† High Pressure Seal
5. *† Metal Backup Shim
6. *† Backup Seal (2)
7. *† Shaft Seal (2)
8. *† Housing Seal
9. *† Body Seals (2)
10. *† Endcover Seal
11. * Seal Carrier
12. * Thrust Washer
13. Front Thrust Bearing
14. Front Housing Bearing
15. Housing
16. Rear Housing Bearing
17. Rear Thrust Bearing
18. Drive Link
19. Manifold
20. Drive Link Spacer
21. Rotor Assembly
22. Balance Plate
23. Steel Balls (3)
24. Endcover
25. I.D. Tag Assembly
26. Assembly Bolts (7)
27. Shaft
28. Shaft Key
29. Shaft Bolt
30. Lock Washer
31. Wire Ring
32. Bearing Spacer
33. * † Excluder Shaft Seal

NOTE: The motor design that utilizes a seal carrier will use the larger O.D. backup seal and shaft seal.

**Standard Displacement (201-75209) & Low Displacement (201-75649)**

LIFT CYLINDER (203-72275)
LIMITED WARRANTY

Limited Warranty: Subject to the limitations set forth herein, M-B Companies, Inc. ("M-B") warrants its products to be free from defects in material and workmanship for a period of twelve (12) months from the date of delivery of the product to its original owner, except that the warranty is twelve (12) months solely for the following products: Truck Mounted Pavement Marking Equipment, Airport Snow Removal Products, Attachment Products, Brushes, MSV Multi-Service Vehicles. Parts shall have a ninety (90) day warranty. This warranty is not transferable without the written consent of M-B.

Notice: M-B’s obligations under this Limited Warranty are conditioned on M-B receiving, within the warranty period, written notice from Buyer specifying the nature of any alleged defect and requesting corrective action by Seller.

Remedies: M-B, at its option, will repair or replace, or provide a credit to Buyer for, defective warranted items. If requested by M-B, products or parts for which a warranty claim is made shall be returned, transportation prepaid, to M-B’s factory. Buyer shall not return any product for repair, replacement or credit without M-B’s advance written consent.

Other Manufacturer’s Warranty: On products furnished by M-B, but manufactured by any other manufacturer, the warranty of said manufacturer, if any, will be assigned to Buyer, if the said warranty is assignable. However, M-B does not represent or guarantee that such manufacturer will comply with any of the terms of the warranty of such manufacturer.

Exclusions: Any improper use, operation beyond capacity, or substitution of parts not approved by M-B, or alteration or repair by others in such a manner as in M-B’s judgment materially and/or adversely affects the product shall void this warranty. This warranty does not apply to defects caused by damage or unreasonable use while in the possession of the owner, including but not limited to: failure to provide reasonable and necessary maintenance, normal wear, routine tune ups or adjustments, improper handling or accidents, operation at speed or load conditions contrary to published specifications, improper or insufficient lubrication, or improper storage.

Seller manufactures power brooms that mount to many makes and models of equipment. Seller attempts to ensure that the mounting frames fit correctly. However, the large number of tractor models, types and options currently available, compounded by frequent manufacturer design changes, may prevent Seller from supplying a frame that fits every unit correctly. Therefore, unless Buyer supplies drawing which detail the attachment points on the specific unit to which the broom will be mounted, Seller will not be responsible for the fit of the mounting frame.

The batteries, tires, rubber material, brushes and material normally consumed in operation, and major components such as engines, air compressors, and hydraulic pumps and motors are excluded from this warranty but may be covered to the extent of any warranty received by M-B from its supplier if permitted by the terms of such warranty.

Limitations of liability: M-B shall not be liable for any incidental, consequential, punitive or special damages of any kind, including, but not limited to, consequential labor costs or transportation charges in connection with the repair or replacement of defective parts, or lost time profits or expense which may have accrued because of said defect.

M-B disclaims all other warranties, whether express or implied, including but not limited to any implied warranty of merchantability or fitness for a particular purpose. This warranty is exclusive remedy of Buyer. This warranty cannot be extended, broadened or changed in any respect except in writing by an authorized officer of M-B.

Notwithstanding anything in this warranty to the contrary, in no event shall M-B’s total liability hereunder exceed the purchased price of the particular product.
